71000 Series, and PSA Series spectrum analyzers,
plus the N9030A PXA signal analyzer

Exceptional performance

The Agilent Technologies 11970 Series harmonic mixers are general purpose mixers employing a dual-diode design to achieve very flat frequency response and low conversion loss. Each mixer is calibrated across its full band:

11970K* 18 to 26.5 GHz	11970Q 33 to 50 GHz	11970V 50 to 75 GHz
11970A 26.5 to 40 GHz	11970U 40 to 60 GHz	11970W 75 to 110 GHz

This series of mixers has been designed for a local oscillator frequency of 3 to 6.1 GHz. Accurate absolute amplitude measurements can be made by using the mixer's conversion loss calibration chart. The SWR of the waveguide input is typically 2.2:1 to further minimize measurement uncertainty. The combination of high gain-compression level and low conversion loss provides the maximum dynamic range for measuring input signals.

Easy to use

The excellent frequency response and low conversion loss are achieved without external dc bias or tuning stubs. Since bias and tuning stubs are not required, manual operation is simplified, and the complexity of hardware and software for automatic systems is greatly reduced. The repeatability of amplitude measurements is also enhanced. The dual-diode design of the mixers further simplifies measurements by suppressing the odd-order harmonics by more than 20 dB, which makes identification of the mixing products easier.

Rugged

The rugged Agilent 11970 Series mixers will survive input levels up to 100 milliwatts (+20 dBm) with no damage to the mixer diodes. They will withstand shocks up to 30 G's and the vibration required by MIL-STD 28800C, Type III, Class 3 tests.

Frequency extension for the Agilent E4407B, 8560E/EC Series, 8566B, and 71000 Series and PSA Series spectrum analyzers

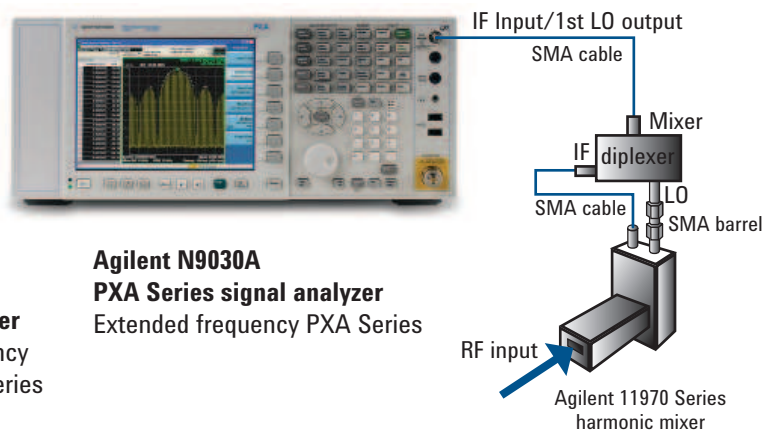

The 11970 Series harmonic mixers are fully compatible with the Agilent E4407B, 8560E/EC Series, 8566B (requires a preamplifier), 71000, and PSA Series spectrum analyzers. Accurate frequency and amplitude measurements are made directly from the spectrum analyzer's display after calibration using the mixer's calibration chart.

Frequency extension for the Agilent N9030A PXA Series signal analyzer

The 11970 Series harmonic mixers (11970K excluded) are also compatible with the N9030A PXA Series high-performance signal analyzer. The PXA offers optional external mixing (Option EXM), enabling it to work with the 11970 Series and other external mixers for frequency extension. An external diplexer is required because the PXA external mixing has a single SMA LO/IF port, whereas the 11970 Series mixers have separate LO and IF ports. Recommended diplexers can be purchased from Agilent as N9029AE13, or from OML Inc. as DLP.313B.

1. An LO power of between 14.5 to 16 dBm at the mixer's LO input is necessary to achieve the given frequency response and spectrum analyzer amplitude accuracy specifications. When LO power varies between 14 to 18 dBm at the mixer's LO input, add ±1 dB to the frequency response and spectrum analyzer amplitude accuracy specification.

Warranty and Service

Standard warranty for 11970 mixers is 12 months

Standard warranty for N9029A-E13 diplexer is 3 months, provided by OML, Inc.

1. When used with 11970 Series mixer in A-, Q-, or V-band, the PXA's LO harmonics are automatically switched between two different numbers as listed to optimize conversion loss.
2. If the LO harmonics are switched, the noise levels for the signal analyzer/mixer combination will change, corresponding to the different LO harmonic numbers.
