

## Agilent Technologies

## Performance Overview

There are three modular mainframes in the 3499 family:

- 3499B - two-slots, up to 80 channels
- 3499A - five-slots, up to 200 channels
- 3499 C $-9 / 14$ slots, up to 360 channels

The 3499C can accommodate up to nine plug-in modules that can occupy up to fourteen physical slots, thus providing a cost efficient configuration for modules that are one, two or three slots wide. All mainframe configurations of Agilent can scan at rates up to 350 channels per second, or open/close 200 channels in less than 0.1 second.

You can choose from different plug-in modules to switch:

- electronic signals from DC to 26.5 GHz
- voltages to 250 V , or currents to 8 A

All units have an efficient user interface that works equally well on the manufacturing floor and in desktop applications. High-performance switching modules, multifunction modules, built-in relay cycle counters and straightforward connections all contribute to the performance and day-to-day usability of the 3499. Here's what it means in the real world...

## Improved Throughput

While traditional switching mainframes open/close relays in sequence, the Agilent 3499A/B/C systems use innovative parallel driving circuits to open/close switches simultaneously, significantly increasing test throughput. The systems also provide high-density modules with up to 40 channels per module.

## Total Flexibility

The 3499A/B/C mainframes accommodate a full range of modules, including multiplexers, general-purpose relays, matrices, digital I/O, VHF modules, RF modules, microwave modules, FormC relays, and multifunction modules. By combining these mainframes and modules, a test system can be set up with fewer modules in less space, and the cost and complexity of the system can be reduced.

## Fast Set-Up

An easy-to-use interface and industrystandard connections mean fast set-up and integration with the 3499. Usability features include:
Standard RS-232 and GPIB interfaces SCPI (Standard Commands for Programmable Instruments) Simplified configuration procedures Self-guiding front panel interface Easy-to-use module connection accessories

Screw terminal block

## Cost-Sensitive Test

With three mainframes and many modules to choose from, you can make sure the 3499 meets your exact needs. Build the system you need today, add more modules later as your needs change. That means you buy only the test capability you need. High-density switch modules further reduce the cost-of-test by combining a large number of channels on a single module. And with up to 40 switching channels per module, the 3499 reduces per-channel cost while saving rack and floor space. You get a simpler system with fewer modules, reducing the cost of buying, owning and maintaining your system.

## Go Configure

Broad configuration flexibility using a wide choice of plug-in modules accounts for the wide adoption of the Agilent 3499 worldwide. The following tables include the selection for your configuration. The 3499 is built for the unpredictable, ever-changing needs of ATE.

## Agilent 3499A/B/C Mainframe Specifications

|  | Items | Specifications |
| :---: | :---: | :---: |
| General | Display | Vacuum fluorescent |
|  | Rear Panel Connectors | GPIB; RS-232; 8-pin mini DIN Connector (5 pins for Digital I/0, 3 pins for external trigger) |
|  | Power Supply | 3499A/B: 100 to 240 VAC universal input ( 47 Hz to 63 Hz ); 100-127 VAC $(400 \mathrm{~Hz}) ; 40$ VA maximum. <br> 3499C: 100 to 240 VAC universal input; 47 Hz to $63 \mathrm{~Hz} ; 65$ VA maximum. |

In addition to the 3499 Series switching, Agilent offers the 34980A Switch/Measure unit for high density switching and the L4400 Series for small distributed applications both at a fraction of the 3499 cost.

Agilent N2260A, N2266A

- High speed switching
- Reconfigurable to 1,2 , and 4 -wire mode
- Built-in relay cycle counters

The N2260A and N2266A are highdensity reconfigurable multiplexer (MUX) modules for high-throughput production test. They can be operated in either SCPI or 3488A mode. In SCPI mode, they can be configured in any of the following ways:

- one 80-channel, 1-wire MUX
- one 40-channel, 2-wire MUX
- dual independent 20 -channel 2-wire MUXs
- one 20-channel 4-wire MUX.

Note: All voltage and current are in DC or AC RMS
if not specified.

Up to five N2260/66As can be included in an 3499A mainframe to build a 1- to 200-channel, 2-wire MUX. Screw terminal block, crimp \& insert terminal block, and DIN96-toD50/25 cables are available for ease of wiring. The N2266A can scan at up to 350 channels/second. Low thermal offset voltage makes the N2260A ideal for low-level signal switching.

## 40-channel General-purpose Relay Module

## Agilent N2261A

- 40 independent relays in one module
- High-speed switching in parallel operation
- Built-in relay cycle counters

The N2261A general-purpose relay module provides 40 independent single-pole-single-throw (SPST) latching relays. Each channel can switch up to $200 \mathrm{~V}, 1 \mathrm{~A}$, and 60 W or 62.5 VA . The innovative parallel driving circuits allow 10 channels to be operated simultaneously for high throughput. It can be operated in either SCPI mode or 3488A mode.

## Specifications

| General Specifications |  |
| :---: | :---: |
| Relays: | Armature latching relay |
| Thermal Offset: | $<3 \mu \mathrm{~V}$ |
| Relay Life |  |
| Mechanical: | $10^{8}$ |

## 4 x 8 Matrix Module

## Agilent N2262A

- Multiple inputs connecting to multiple outputs
- High-speed switching in parallel operation
- Built-in relay cycle counters

The N2262A 4x8 matrix module contains 32 cross points organized in a 4 -row by 8 -column config-uration. It provides a convenient way to connect a group of test instruments to multiple test points on DUTs. Each cross point in the module switches two wires for the high and low measurement. Multiple matrix modules can be connected for applications that require large matrices. For example, four N2262As can be combined as a 16x8 matrix.

## 32-Bit Digital Input/Output Module

Agilent N2263A

- TTL compatible, sinking up to 0.6 A
- Input /output configurable byte-by-byte
- Three I/O control modes: static, strobe, and handshake

The N2263A provides 32-bit bidirectional lines and three handshake and control lines. The 32-bit I/O lines are TTL compatible input/ output, or TTL compatible input and open collector output up to 42 V . The 32-bit I/O lines can be addressed individually (byte-by-byte), either as a 32-bit port, four independent 8 -bit ports, or as two independent 16-bit ports. A Zener diode is used in each channel for input voltage overprotection (> 42 VDC), including ESD protection.

## Specifications

General Specifications
I/0 Lines
Maximum Voltage(line-chassis):

| +42 VDC |
| :--- |
| Maximum Sink Current(per bit): |
| 0.6 A |
| Output Characteristics: |
| $\mathrm{V}_{\text {out }}$ (high) $\quad \geq 2.4 \mathrm{~V}$ @ I $\leq 10 \mathrm{~mA}$ output |
| $\mathrm{V}_{\text {out }}$ (low) $\quad \leq 0.8 \mathrm{~V}$ @ I $\leq 600 \mathrm{~mA}$ input |

Input Characteristics:

| $V_{\text {in }}$ (high) | $\geq 2.0 \mathrm{~V}$ |
| :--- | :--- |
| $\mathrm{~V}_{\text {in }}$ (low) | $\leq 0.8 \mathrm{~V}$ |

Each I/O line can sink up to 0.6 A to control external devices, including:

- High-voltage/high current relays
- Microwave relays and attenuators (8710xx, 876xx and 849xx)
- Solenoid coils

The polarities of the I/O and handshake lines can be operated in positive or negative logic mode. With the three control lines (PCTL, I/O, and PFLG), you can define five handshake modes for communication with peripherals. The screw terminal block and DIN96-to-Twin-D50 cable are available for simple wiring.

## Handshake Lines

Maximum Voltage(line-chassis): $\quad+5$ VDC
Output Characteristics:

| $\mathrm{V}_{\text {out }}$ (high) | $\geq 2.4 \mathrm{~V} @ \mathrm{I} \leq 400 \mu \mathrm{~A}$ output |
| :--- | :--- |
| $\mathrm{V}_{\text {out }}$ (low) | $\leq 0.5 \mathrm{~V} @ \mathrm{I} \leq 1 \mathrm{~mA}$ input |
| $\mathrm{I}_{\text {out }}$ (low) | $<25 \mathrm{~mA}$ |
|  | (when shorted to +5 V ) |

Input Characteristics:

| $\mathrm{V}_{\text {in }}$ (high) | $\geq 2.0 \mathrm{~V}$ |
| :--- | :--- |
| $\mathrm{~V}_{\text {in }}$ (low) | $\leq 0.8 \mathrm{~V}$ |

## Agilent N2264A

- $12+3$ GP + 16-bit digital I/O in one module
- High-speed switching in parallel operation
- Built-in relay cycle counters

## N2264A Multifunction Module

The Agilent N2264A multifunction module combines 12 general-purpose relays, three high-current relays, and 16 -bit digital input/ output in one module, saving cost and space. Its three high-current channels are especially useful in automated test systems for cellular phone test or battery test, where only two or three low-resistance channels are needed. Four connection accessories simplify wiring.

The 12 general-purpose channels are non-latching relays that can switch up to $200 \mathrm{~V}, 1 \mathrm{~A}, 60 \mathrm{~W}$ or 62.5 VA . The three high-current channels are

## Agilent N2267A

- Switching up to $8 \mathrm{~A}, 250 \mathrm{~V}$
- Built-in overheat protection for high reliability

The N2267A is designed for highcurrent (up to 8 A contin-uous), lowresistance switching applications, such as $A C / D C$ power supply testing. It can also be used to switch on/off AC (up to 250 V ) or DC (up to 125 V ) power supplies and current sources. Each channel can carry 8 A current at the same time. For thermal protection and reliability, the N2267A has built-in temper-ature control circuitry that uses sensor ICs and a cooling fan. An over-temperature warning signal is also available to activate an external LED or buzzer. A crimp \& insert connector (N2327A) is available.

A protection network area is provided on the module's PCB, for switching inductive loads such as electric motors, solenoids, contacts, chokes, electromagnets and incandescent lamps. To protect relays from overvoltage damage, the RC network or the varistors must be placed on this module, which can effectively absorb the surge voltage.

## Dual $1 \times 4$ RF Multiplexer ( $3.0 \mathrm{GHz}, 50 \Omega$ )

## Agilent N2268A

- Ideal for wireless communication test
- Insertion loss $<1.7 \mathrm{~dB}$ at 3.0 GHz

The N2268A multiplexer module has two 1x4 independent multi-plexers with SMA connectors, delivering high performance, very low insertion loss, high isolation, and excellent VSWR performance. This high-density RF multiplexer module is an economical RF signal switching solution. Its 3.0 GHz bandwidth guarantees signals will not be degraded when switched from source to destination. Each group of four channels is isolated from the other and from the chassis to prevent ground loops. The widebandwidth performance enables

## $1 \times 9$ RF ( 1 GHz ) Multiplexer Module

## Agilent N2272A

- Ease of channel density extension
- Ideal for high density RF signal routing
- Ease of wiring with BNC connectors

The N2272A RF high-density module provides a 1x9 multi-plexer that can be widely used in RF test and measurement system. It consists of a series of eight RF latching relays in a tree structure. The module's low insertion loss, high isolation and excellent VSWR performance guarantee that the RF signals will not be degraded when routed from source to destination. In order to decrease the degradation when cascading, the auxiliary channel (channel 08) with smaller insertion loss and lower VSWR, is provided. In order to extend the channel count, channel 08 can

## Dual 1x6 Microwave (26.5 GHz) Multiplexer

## Agilent N2276A

- Quick set-up microwave switching to save integration time
- Modular microwave switching to fit each application
- Can also drive two external microwave attenuators

The 3-slot N2276A module (option 206) provides dual $1 \times 6$ microwave multiplexers, with excellent insertion loss, isolation and VSWR performance. With option 204, the N2276A becomes a dual $1 \times 4$ microwave multi-plexers, while keeping all the other features. The modular N2276A can exactly fit your application channel density needs, minimizing the redundant channel, thus offering the most cost effective microwave switching. The SMA connectors on module's front panel are provided for high performance

connections. The N2276A can also drive two external microwave attenuators (Agilent 84904/6/7/K/L).

The N2276A can be used in the testing of cellular phone, cordless phone, mobile radios, cellular base station, broad-band wireless communication transceivers, RFICs, and high-speed digital circuits.

The N2276A can only be operated in SCPI mode when installed in 3499A/C mainframes with firmware 3.0 or later.

## Microwave Multiplexer Module

## Agilent 44476A

- Switching signals from DC to 18 GHz
- Triple 1-to-2 microwave multiplexers

The 44476A includes three independent SPDT $50 \Omega$ coaxial relays with excellent electrical performance from DC to 18 GHz . For general-purpose microwave switching applications, the module can be used to switch separate signal sources for a multi-band receiver/transmitter testing application. The 3 mm SMA connector on the module edge simplifies wiring.

## Agilent 44478A/B

- Switching up to $1 \mathrm{~A}, 24 \mathrm{~W}$ or 24 VA
- Insertion loss less than 1.9 dB at 1.3 GHz

The 44478A/B multiplexer module is an ideal choice for broadband switching of high-frequency or fast pulse signals. Dual 1-to-4 multiplexers provide bi-directional switching of signals from DC to 1.3 GHz . High channel isolation ( $>55 \mathrm{~dB}$ at 1 GHz ) assures quality dynamic-range measurements using spectrum, network, or distortion analyzers. Each 1-to-4 multiplexer consists of seven relays in a "tree" structure, which provides high isolation and low VSWR (voltage standing wave ratio). All the connectors on the module's edge are female BNC for ease of wiring. Off-channels

## 44470A

10-channel Multiplexer Module (2 A, 250 V )

44470D
20-channel Multiplexer Module (2 A, 250 V)

## 44471A

10-channel General-purpose Module (2 A, 250 V)

44471D
20-channel General-purpose Module (1 A, 250 V )

The 44470A, 44470D, 44471A, and 44471D are designed for lowchannel count applications, with higher switching capability (current or voltage) than N2260A or N2261A modules.

## 44472A

Dual 1x4 RF Multiplexer Module ( $300 \mathrm{MHz}, 50 \Omega$ )

The 44472A RF multiplexer module offers broadband switching capability for high-frequency and pulse signals. Two independent $50 \Omega$ characteristic impedance $1 \times 4$ switches are provided for signal from DC to 300 MHz . BNC connectors on the module allow for easy connection.

## 44473A

$4 \times 4$ Matrix Module (2 A, 250 V )
44474A
16-Bit Digital I/O Module (TTL compatible)

All of the modules listed are designed for 3488A mainframes, work in the 3499A/B/C.

## Rack Mounting Kits

3499A

Agilent 3499A Rack Mount Kit with Handles (Opt. 1CP)

## 3499 Product Alternative

Although the 3499A/B/C Switch/ Control system has been a great addition to many test systems, the new

- 34980A Mainframe and Modules, and the
- L4400 Series Switch and Control Instruments
are even better product alternatives. The 34980A and L4400 series both offer a greater selection of modules plus measurement capability, standard PC connections for communication, and a selection of easy to connect to modules. The wide offering of modules for the 34980A and L4400 series enables you to select a configuration for your specific application needs. The 34980A Switch/Measure unit and $L 4400$ series products can be used in the same applications as the 3499A/B/C including design verification, functional test and data acquisition applications. They can also be used in many new applications such as for data logging, data acquisition systems and/or switch systems. The 34980A and L4400 offer great switching, measurement and test system control solutions at a great value.

## Agilent 34980A Mainframe and Modules

The Agilent 34980A is an eight-slot mainframe that includes an optional built-in $61 / 2$ digit DMM. Choose from 19 optional plug-in modules that offer a broad range of functionality that includes DC to 20 GHz switching, counter/totalizer, digital I/O with pattern capabilities, and D/A converters - in one compact, high-performance modular platform. In addition to data logging, data acquisition or switch system the 34980A can even provide a solution for applications requiring transducer-based measurements such as thermocouple or strain.

## Agilent L4400 Series Switch

 and Control InstrumentsThe Agilent L4400 series switch and control instruments offer high performance switching, digital I/O, D/A converters, counter/totalizer and more in standalone LXI instruments. With their small size and Ethernet connectivity, these LXI instruments can be placed wherever your application needs them.

For more details please see
www.agilent.com/find/34980A or www.agilent.com/find/L4400.

## Remove all doubt

Our repair and calibration services will get your equipment back to you, performing like new, when promised. You will get full value out of your Agilent equipment throughout its lifetime. Your equipment will be serviced by Agilent-trained technicians using the latest factory calibration procedures, automated repair diagnostics and genuine parts. You will always have the utmost confidence in your measurements. For information regarding self maintenance of this product, please contact your Agilent office.

Agilent offers a wide range of additional expert test and measurement services for your equipment, including initial start-up assistance, onsite education and training, as well as design, system integration, and project management.
