

Agilent E1351A 16-Channel FET Multiplexer

Data Sheet

- 1-Slot, B-size, register based
- Up to 13,000 channels/s scanning with Agilent's DMMs
- 100,000 switches/second from downloaded scan list
- Voltage, current, and resistance measurements
 - Space for signal conditioning components

Agilent E1351A

Description

The Agilent E1351A FET Multiplexer is a **B-size**, **1-slot**, **register-based VXI module** that switches 16 channels each of high, low, and guard. The FET multiplexer module consists of a B-size component card (labeled E1351-66201 on each one) and a screw terminal block that plugs onto the component card. The E1351A is functionally similar to the E1352A and E1353A.

An analog bus connector on the faceplate provides easy connection to an E1326B DMM, E1411B DMM, and/or other slot-adjacent multiplexers. Common high, low, and guard signals are connected by tree switch to both the tree terminals on the terminal card and the analog bus connector. Refer to the Agilent Technologies Website for instrument driver availability and downloading instructions, as well as for recent product updates, if applicable.

Configuration

Common high, low, and guard signals are connected by tree switch to both the tree terminals on the terminal card and the analog bus connector.

A digital bus cable is shipped with each module, which attaches to a digital bus connector on the faceplates and is used to synchronize scanned measurements up to 13,000/ second with either the E1326B DMM or E1411B DMM. Use of this bus requires the SCPI command TRIGger:SOURce DBUS. To connect an external DMM to the FET multiplexer for highspeed scanning synchronization up to 100,000 switches/ second, order the digital FET MUX-to-DMM cable below.

One analog bus cable is shipped with each module, making it easy to connect multiplexer common outputs together for slot-adjacent modules. If you are using a B-size mainframe, E1300B or E1301B, use the analog bus cable shipped with the E1326A DMM to connect it to the multiplexer(s).

C-size Adapter

For installing the E1351A in a C-size mainframe, the E1403C active adapter is recommended.

Agilent Technologies' test and measurement service/support commitment

Agilent strives to maximize the value our test and measurement products give you, while minimizing your risk and service/support problems. We work to ensure that each product is realistically described in the literature, meets its stated performance and functionality, has a clearly stated global warranty, and is supported at least five years beyond its production life. Our extensive selfhelp tools include many online resources (www.agilent.com).

Experienced Agilent test engineers throughout the world offer practical recommendations for product evaluation and selection. After you purchase an Agilent product, they can provide no-charge assistance with operation verification and basic measurement setups for advertised capabilities. To enhance the features, performance, and flexibility of your test and measurement products—and to help you solve application challenges—Agilent offers free or extra-cost product options and upgrades, and sell expert engineering, calibration, and other consulting services.
