Information on Requesting a Quote and Placing an Order Inside Back Cover
Other Products Available - Overview of AMREL's eLoad Line Outside Back Cover

## ePawer Offers $50-400 \mathrm{~Hz}$ AC InPut FREQUENCY IN HIGH POWER RANGES

AMREL's ePower Line of High Power Switch Mode Supplies, with up to 400 Hz ac input frequency, was specifically designed to address application requirements for Military and Commercial Aircraft electrical systems.

## ePowver OFFERS SEALED, WATER-COOLED MODELS FOR HARSH ENVIRONMENTS

- Available Models: 10kW, 15kW, 25kW, 30kW, 45kW
- Wide Selection of Voltage and Current Combinations
- Critical Components Completely Isolated from Environment
- Ideal for Electroplating or Water Treatment Applications
- Current Fed Technology Provides High Reliability
ePawner the widest range of POWER SUPPLES ON THE MARKET

LINEAR
-20W to 2,000W

- 5 V to 350 V
- 0.15A to 50A

SWITCH MODE

- 1.2 kW to $500 \mathrm{~kW}+$
- 5 V to 2500 V
- 2 A to $7500 \mathrm{~A}+$

The $e$ Power Line has a power solution for almost any application.

## ePawer meets the toughest spec requireMENTS WITH CUSTOM AND MODIFIED SOLUTIONS

- Industry Leading Engineering Team
- Quick Turn on Modifield Standard Products
- Complete Documentation from Proposal to Acceptance
- Integration Applications Partnering

SPDC Customized Dual Channel Switch Mode (see page 32 for more examples of customizations)

## NEMA ENCLOSURES PROTECT THE P Pawer SUPPLY FROM THE HARSHEST ENVIRONMENTS

- Standard NEMA 3R

Weatherized Enclosures

- Indoor \& Outdoor

Environments

- Protection Against Harsh Environments
- Dirt, Rain, Sleet, Snow
- External Formation of Ice

## ePawer AMREL's MCU NETWORK

## MCU Controller = Unlimited Expansion

- Complete Remote Access \& Control
- Embedded Ethernet or RS-485 Interface
- One MCU Controls 8 Power Supplies
- Add More MCU Controllers for Unlimited Expansion

## ePawer current fed technology for increased reliability

- Unlike voltage fed converters, e Powers current fed converters eliminate fast rising current spikes or magnetic core saturation.
- Operate with the robustness of an SCR based power supply, but at high frequency.
- Includes an additional power processing stage, which can be used for control and an enhanced system
* Please note this feature is available with the SPS3.3kW and up models and the HPS Series

## MILITARY ATE TEST SYSTEMS

AMREL's e Power programmable switch mode power supplies (SPS) are utilized extensively in military applications such as the Joint Strike Fighter (JSF) Program. Our power supply features allow easy integration and operation in ATE Systems, ranging from Avionics Testing to Maintenance Depot Stations. With its compact size, as low as 1 U -high, and wide range of available interfaces, GPIB, RS-232, USB, Ethernet, and RS-485, AMREL's SPS
Series has become our most popular ATE power supply. Each model within the SPS Series is ready for rack and stack environments, right out of the box. There is no need for rack mount hardware as each unit comes in a standard 19 " rack width including front panel integrated mounting ears. For simple ATE integration, SCPI commands and LabVIEW /LabWindows Drivers are available.

Sampling of Applications Utilizing AMREL's ePawer Supplies

| Product | Military/ATE Test Systems |  |  |  |  |  | $\begin{aligned} & \overline{\mathrm{O}} \\ & \frac{\mathrm{O}}{0} \\ & \mathrm{D} \end{aligned}$ |  | $\begin{aligned} & \frac{0}{0} \\ & \frac{0}{0} \\ & \sum_{0}^{0} \\ & 0 \end{aligned}$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## BURN-IN TEST

Whether your requirement is for Static or Dynamic Burn-in, AMREL's ePower switch mode power supplies have the reliability and robustness to run 24/7 at full power. Programming the voltages and currents for your burn-in power supply is as simple as turning a knob, providing an analog trigger signal or sending software command via one of the available Interfaces: GPIB, RS-232, USB, or Ethernet. For bulk power requirements, AMREL has e Power units ranging from 3.3 kW up to 150 kW . The SPS series offers the necessary flexibility required for a wide range of burn-in applications.

## MANUFACTURING TEST

AMREL's e Power line has the widest range of voltage, current, and power level options, to meet your circuit board and component testing requirements. For production line automation, all AMREL power supplies provide output sequencing programming, allowing you to quickly program your power supply to different types of test routines. Combined with a number of available control interfaces, each power supply can easily adapt to different programming environments within your manufacturing test setups. Automated tests can also be realized utilizing e Power supplies' SCPI commands, as well as LabVIEW and LabWindows drivers.

## R\&D/LAB TEST

AMREL's PD Series of programmable dc linear power supplies are designed for both bench-top and rack and stack environments. The PD model has a very clean output for demanding product design tests and product validation. With an Output Ripple and Noise of typically $1-3 \mathrm{mV}$ pp and a load regulation of 1 mV and 1 mA , the PD series is ideal for any low noise application.

In addition to the above applications, AMREL's ePower line of programmable linear (PD) and switch mode (SPS/HPS) power supplies are used in the following applications: General ATE, Test and Measurement, Medical, Magnetic Coils, DC Motors, RF Amplifiers, Electrodeposition, Laser Diode, and Automotive Electronics.

S=Standard
O=Optional
N/A=Not Available
*Note: SPS 1.5 kW models are available with a 208 Vac , three phase input or 240 Vac , one phase input. SPS and SPD 1.2 kW models offer a choice of 120 Vac or 240 Vac for no additional cost. SPS 1.5 kW models range from $12 \mathrm{~V}-600 \mathrm{~V}$ and $2.5 \mathrm{~A}-125 \mathrm{~A}$.

## PROGRAMMABLE SWITCH MODE POWER SUPPLIES

## Common Features for ALL SPS 1.2kW and 1.5kW Models

- Automatic Constant Voltage/Constant Current Mode Crossover
- Multiple units can be connected in parallel or in series to provide increased current or voltage
- Output Voltage Ratings up to 800 Vdc and Current Ratings up to 150Adc
- Standard 19" Width for ATE and System rackmount integration
- High Power Density - $1.2 \mathrm{~kW} / 1.5 \mathrm{~kW}$ in a 1 U package
- Fan-speed Control to reduce acoustic noise
- Remote Sensing to compensate for measurement errors due to large line drops
- High-resolution 16 bit ADC \& DAC Design
- Active Down Programming Control for fast down programming speed
- Remote Programming Control with Standardized SCPI Commands for integrated ATE testing available
- Polarity Reversal \& Isolation Output Relays available
- LabVIEW/LabWindows Drivers
- Modified \& Customized Solutions

## K- Panel Version (Keypad and Encoder)

- Standard Embedded RS-232, IEEE488.2 SCPI/GPIB, USB, and Ethernet Interfaces
- User-friendly Keypad and Real-time Encoder allows flexible control
- 16 bit Digital Design for high-resolution accurate measurements via a 2X20 VFD display or remote interfaces without the need for a DMM
- $\quad$ The $V_{\text {LIST }}$ (voltage) and ILIST (current) Stepping Modes generate user-defined sequence of output level up to 20 steps (points), with dwell times from 10 ms to 1 minute stored in 4 profiles (This sequence can be cycled once or to a user-defined number of cycles)
- Designed with durability, reliability and DUT protection in mind Programmable OVP (Over-voltage Protection), OCP (Over-current Protection), Redundant OTP (Over-temperature Protection), UVP (Under-voltage Protection), Remote Lockout (for ILIST, $\mathrm{V}_{\text {LIST }}$ and ATE), Remote Inhibit (RI) \& TTL Fault Output Signal for system level protection

## V - Panel Version (Voltage/Current Encoder Knobs)

- Dual encoders and front panel indicators for real-time control and monitoring
- 16 bit ADC/DAC design for high-resolution measurements via dual-LED displays or Remote Read back without the need for a DMM
- Total Modular System Control
- Control multiple units as a single block and master/slave parallel the power supplies with built-in active current sharing via the RS-485, with enhanced front panel ventilation to achieve simple and economical system expansion in a zero-stack configuration
- Output Sequencing precisely controls individual power supply output on/off states with timed delays
- Embedded RS-232, RS-485, IEEE488.2 SCPI/GPIB, and optional USB/Ethernet for flexible ATE integration

## 0 - Panel Version (Voltage/Current Potentiometer)

- Simultaneous digital display of both current and voltage, and dual Ten-turn potentiometer for high resolution setting of the output voltage and current from zero to the rated output
- Front panel trim adjustment for OVP set points. Front panel (LED) indicators for constant voltage and constant current mode operation, OVP, thermal, and TTL shutdown (S/D)
- $0 \sim 5 \mathrm{Vdc}$ Remote voltage and current monitor, $0 \sim 5 \mathrm{Vdc} / 0 \sim$ 10 Vdc remote voltage/current programming
- Embedded RS-232, IEEE488.2 SCPI/GPIB, \& RS-485
- Programmable OVP (Over-voltage Protection) and OCP (Over-current Protection), redundant OTP (Overtemperature Protection) \& UVP (Under-voltage Protection)
- Interlock protection ready - Remote Inhibit (RI) \& TTL Fault Output Signal for system level protection
- The V LIST (voltage) and ILIST (current) stepping modes via remote programming
- Electronic Remote/Local Closed-cased calibration
- RS-485 controlled models are available without front panel control

## 1.5kW Version (Highest Power Density)

- Includes all features of the V-version SPS
- Up to 1.5 kW power output in a single 1 U box with 208 or 240Vac input
- RS-485 Controlled 1.5kW Modules with active current sharing provides flexible \& simple system expansion to fulfill future test requirements by adding to existing systems instead of purchasing expensive new systems

Remote Interfaces Available for simple and flexible ATE Integration

- Control multiple units as a single block and master/slave parallel the power supplies with built-in active current sharing via RS-485 to achieve simple and economical system expansion
- Analog-Only, control models available

*1: All electronic specifications are represented at the full operating temperature range for all models.
*2: The programming and readback resolution is based on 16 bit resolution design.
*3: Load regulation specifications are for 10-90\% load changes.
*4: Line regulation specifications are for input voltage variation over the ac input voltage range with constant rated load.
(1.2kW Single Channel Switch Mode)

*5: Ripple and Noise specifications are for $10-100 \%$ output voltage and full output current.
*6: Time for output voltage to recover to within $+1-0.5 \%$ of $V_{\text {FULLSCALE }}$ following a $10 \%$ ~ $60 \%$ load current change
*7: Programming speed specifications are for $50 \%$ of full current loading.
*8: Temperature coefficient specifies output change per ${ }^{\circ} \mathrm{C}$ in ambient temperature rise following 30 minute warm up with constant line and load. *9: AC Input is fixed and factory configured to either 103.5 ~ 126.5Vac or 207~253Vac @ 50/60 Hz.

*1: All electronic specifications are represented at the full operating temperature range for all models.
*2: The programming and readback resolution is based on 16 bit resolution design.
*3: Load regulation specifications are for 10-90\% load changes.
*4: Line regulation specifications are for input voltage variation over the ac input voltage range with constant rated load.

*1: All electronic specifications are represented at the full operating temperature range for all models.
*2: Minimum voltage is guaranteed to maximum $0.15 \%$ of the rated output voltage.
*3: Minimum current is guaranteed to maximum $0.5 \%$ of the rated output current.
*4: The remote programming/readback accuracy specifications are guaranteed within $0.2 \%$ of max rated voltage and $0.3 \%$ of max rated current plus offset.
*5: The remote programming and readback resolutions are based on 16 bit resolution.
*6: Load regulation specifications are for 10-90\% load changes.
*7: Line regulation specifications are for input voltage variation over the ac input voltage range with constant rated load.
*8: Ripple and Noise specifications are for $10-100 \%$ output voltage and full output current.
*9: Time for output voltage to recover to within $+/-0.5 \%$ of $V_{\text {FULL-SCALE }}$ following a $10 \% \sim 60 \%$ load current change.
*10: Programming speed specifications are for $50 \%$ of full current loading.
*11: Drift specifications are maximum drift over 8 hours with constant line, load, and temperature after 30 minutes of warm-up.
*12. Temperature coefficient specifications are for changes in output per ${ }^{\circ} \mathrm{C}$ change in ambient temperature with constant line and load.

*1: All electronic specifications are represented at the full operating temperature range for all models and subject to change without notice.
*2: The programming and measurement resolution is based on 16 bit resolution design
*3: Load regulation specifications are for 10-90\% load changes.
*4: Line regulation specifications are for input voltage variation over the ac input voltage range with constant rated load
*5: Ripple and Noise specifications are for 10-100\% output voltage and full output current.
*6: Time for output voltage to recover to within +/- $0.5 \%$ of $V_{\text {FULL-SCALE }}$ following a $10 \% \sim 60 \%$ load current change.
*7: Programming speed specifications are for $50 \%$ of full current loading.
*8: Temperature coefficient specifies output change per ${ }^{\circ} \mathrm{C}$ in ambient temperature rise following 30 minute warm up with constant line and load.
*9: AC Input is fixed and factory configured to either 208Vac: 187.5 ~ 229Vac or 240Vac: 207 ~ 253Vac @ 50/60Hz.

Selector Guide for SPS 1.2 kW Models (K-Panel Version) SPS XXX-XXX-KOEX

AC Input: $\mathbf{0}=120 \mathrm{Vac}$
$1=240 \mathrm{Vac}$
Computer Interfaces: E=Ethernet, USB, GPIB, and RS232
$\rightarrow$ Output Isolation/Polarity Reversal Relays: $\mathbf{0}=$ None (Not available on these models)
$\rightarrow$ Front Panel Version: K = Keypad and Encoder Knob
$\rightarrow$ Maximum Current
$\rightarrow$ Maximum Voltage

## Common Features for ALL SPD Models

- High-resolution 16 bit ADC/DAC Design provides accurate and precise voltage and current measurements simultaneously without the need for an external DMM
- Independent Dual-channel Voltage/Current Programming and Readback
- Simple \& Flexible ATE Integration - embedded RS-232, IEEE488.2, SCPI/GPIB, RS-485, and Ethernet interfaces available
- Automatic Constant Current or Constant Voltage Mode Crossover
- Master/Slave Parallel Capability via RS-485 for simple multi-channel configuration and control
- Multiple units can be connected in parallel or in series to provide increased voltage or current
- Remote Inhibit (RI) and Fault Monitoring (FLT) Functions can be performed via a simple connector
- Economical and Expandable Dual Channel 360W Per Output in a Single 1U Chassis fills the power gap between available 200W and 600W outputs
- Remote Sensing to compensate for measurement errors due to large line drops
- Electronic Remote/Local Closed-cased Calibration
- Active Down Programming Control for fast down programming speed
- Low Ripple and Noise (PARD)
- LabVIEW/LabWindows Drivers

## 0 - Panel Version

- Independent 4 digit LED Voltage and Current Display for each channel and monitoring indicators
- A single SPD Master Unit can control up to a total of 64 channels via a single IEEE488.2 SCPI/GPIB RS-232, RS-485 or Ethernet computer connection, eliminating the increased costs of purchasing multiple systems with built-in controllers
- $\quad V_{\text {LIST }}$ (voltage) and ILIST (current) Stepping Modes Accessible via Remote Programming

## K - Panel Version (Keypad and Encoder)

- Standard Embedded RS-232, IEEE488.2 SCPI/GPIB, and Ethernet Interfaces for flexible connectivity
- Precise Voltage/Current Measurements, Programmable OVP, OCP, V $_{\text {LIST }}$, ${ }_{\text {LIST }}$, and other system indicators are conveniently presented on a 20X2 VFD display
- Designed with durability, reliability and DUT protection in mind - Programmable OVP (Over-voltage Protection), and OCP (Over-current Protection), Redundant OTP (Over-temperature Protection), UVP (Under-voltage Protection), Remote Lockout (for ILIST, $\mathrm{V}_{\text {LIST }}$ and ATE), Fan-speed Control, External Power Supply Output Shut Down \& TTL Fault Output Signal for system level protection
- Auto-tracking Feature
- The $\mathrm{V}_{\text {LIST }}$ (voltage) and I LIST (current) Stepping Modes Generate User-defined Sequence of output levels up to a 20 steps (points), with dwell times from 10ms to 1 minute stored in 4 profiles (This sequence can be cycled once or to a user-defined number of cycles)
- Master/Slave Parallel Capability available

## PROGRAMMABLE SWITCH MODE POWER SUPPLIES

Features for SPS 3.3kW-45kW and ALL HPS High Power Switching Power Supplies

SPS 3.3kW and above Rackmount Models

- 20X2 VFD Displays Easy-to-read and Accurate Constant Voltage and Constant Current Settings and Values
- Digital OVP, OCP, ILIST and $\mathrm{V}_{\text {LIST }}$ Display for easy function recognition
- Real-time Encoder provides precise and on-the-fly voltage and current control
- Automatic Constant Voltage \& Constant Current Mode Crossover
- Multi-functional Front Panel Keypad for high resolution and precise digital OVP, OCP, ILIST, $\mathrm{V}_{\text {LIST }}$, current, and voltage control
- Remote Programming Control with standardized SCPI commands for advanced and integrated ATE testing
- MCU-2 Master Controller can control up to 8 SPS and cascaded for up to 800 SPS units - for extensive and versatile control of highly complex and integrated systems
- Embedded Ethernet and USB Interface Option without the need for interface converters
- Remote Inhibit (RI) and Interlock provides external output shutdown capability - in case of hazardous faults
- External Fault (FLT) and Remote Inhibit (RI) Signal for scaled remote ATE system integration
- Remote/Front Panel Lockout to ensure protection for remote ATE systems
- In-field GPIB, RS232, USB, Ethernet, and Firmware Upgrades to prevent down-time, satisfy new and dynamic system applications and provide up-to-date software maintenance
- 16 bit Readback and Programming A-D/D-A yields high resolution and accuracy for standalone or burn-in testing without the need for external measuring equipment
- Convenient and Robust Automated Testing - Four 20 Step profiles; Electronic Local/Remote Closed-case Calibration will minimize down-time, reduce maintenance costs, and elevate Return on Investment (ROI)
- Remote Sensing to compensate for measurement errors due to large line drops
- Increased control precision and convenience for external programming applications achieved through User-Selectable CV/CC/OV External Control, as well as Automated $V_{\text {LIST }}$ and ILIST Profiles
- LabVIEW/LabWindows Drivers

HPS Series High Power, Cabinet Mount Models

## Common Specifications

Input voltage (Factory Configured):
208/240 Vac, $50-400 \mathrm{~Hz}, 3 \varphi$
$380 / 415 \mathrm{Vac}, 50-400 \mathrm{~Hz}, 3 \varphi$
$440 / 480 \mathrm{Vac}, 50-400 \mathrm{~Hz}, 3 \varphi$
Line regulation:
Voltage Mode: $\pm .004 \%$ of full scale
Current Mode: $\pm .02 \%$ of full scale
Load regulation:
Voltage Mode: $\pm .01 \%$ of full scale
Current Mode: $\pm .04 \%$ of full scale
Stability: $0.10 \%$ for 8 hours after 30 minute warm up
Load transient response:
2 ms to recover within $\pm 1 \%$ of regulated output with a $50 \%$ to
$100 \%$ or $100 \%$ to $50 \%$ step load change
Efficiency: Greater than 86\%
Temperature coefficient: $0.04 \% /{ }^{\circ} \mathrm{C}$ of maximum output current
Isolation:
Maximum input voltage to ground: $\pm 2500 \mathrm{Vac}$
Maximum output voltage to ground: $\pm 1000 \mathrm{Vdc}$
User inputs and outputs: referenced to earth ground

Power Factor: Greater than $92 \%$ at maximum power
Ambient Temperature: 0 to $50^{\circ} \mathrm{C}$
Storage Temperature: -25 to $+85^{\circ} \mathrm{C}$
Remote sense limits: 3\% maximum voltage drop from output terminals to load

Digital programming accuracy of full scale:
Voltage set point: $\pm .50 \%$
Current set point: $\pm .75 \%$
Over voltage trip set point: $\pm .50 \%$
Over current trip set point: $\pm .75 \%$
Digital readback accuracy of full scale:
Output voltage: $\pm .50 \%$
Output current: $\pm .75 \%$
Dimensions SPS Models:
$51 / 4 " \mathrm{H} \times 19$ "W x 24 "D (3.3kW to 15 kW )
$101 / 4^{\prime \prime} \mathrm{H} \times 19$ "W x 24 "D ( 20 kW to 30 kW )
15 3/4"H x 19W x 24"D (45kW)
Dimensions HPS Models:
$381 / 2^{\prime \prime} \mathrm{H} \times 22^{\prime \mathrm{W}} \times 29^{\prime \prime} \mathrm{D}$ (30kW to 60 kW )
$49 " \mathrm{H} \times 22$ "W x 29 "D ( 75 kW )
$621 / 2^{\prime \prime} \mathrm{H} \times 48^{\prime \prime W} \times 311 / 2^{\prime 2} \mathrm{D}(100 \mathrm{~kW}, 150 \mathrm{~kW})$

Please Note: Water-cooled models are available - contact AMREL for more information.

## for HPS \& SPS (3.3kW-45kW) SWITCH MODE POWER SUPPLIES

FRONT VIEW OF K-PANEL VERSION

## PROGRAMMABLE LINEAR POWER SUPPLIES

## Common Features for ALL PD Models

- Fast Transient Response - 50us
- Low Ripple and Noise (PARD)
- 16 bit Digital Design Displays both voltage and current measurements, OVP, OCP, V ${ }_{\text {LIST }}$, l${ }^{\text {LIST }}$, and other system indicator on an LCD display simultaneously without the need for external DMM or monitoring
- Front Panel Keypad for precise and easy-to-operate setting of the output voltage, current and other system functions
- Automatic Crossover of Constant Current or Constant Voltage Mode.
- Embedded RS-232 and IEEE488.2 SCPI/GPIB Standard and Optional Ethernet or USB-only Control for flexible remote digital programming and read back
- Optional RS-485 for Master/Slave Paralleling \& to control multiple blocks of identically rated power supplies with a single PC interface connection
- $\quad V_{\text {LIST }}$ and ILIST in Stepping Mode, PD Series to generate customized sequence of different output level up to maximum of 20 steps (points), with dwell times from 10 ms to 1 minute stored in 4 profiles (This sequence can be cycled once or to a user-defined number of cycles)
- High-speed and Ultra-precision Design with 0.04\% measurement accuracy and $0.1 \mathrm{~mA} / 0.5 \mathrm{mV}$ resolution (not applicable to all models)
- Programmable OVP (Over-voltage Protection) \& OCP (Over-current Protection), Redundant OTP (Overtemperature Protection), UVP (Under-voltage Protection), Remote Lockout (for ILIST, V LIST and ATE), Fan-speed Control
- Remote Sensing to compensate for measurement errors due to large line drops
- Electronic Remote/Local Closed-cased Calibration
- Active Down Programming Control for fast down programming speed
- Polarity Reversal \& Isolation Output Relays available
- LabVIEW/LabWindows Drivers
- Local/Remote Voltage and Current Limit Programming with selectable programming ranges (Optional)
- TTL Function to enable/disable the power supply output. (Optional)
- External Analog Voltage ( 0 to +10 Vdc ) Input for the programming voltage/current output (Optional)
- Multi-channel systems available, up to 8 channels per chassis. (PDS Models)
- Modified \& Customized Solutions such as higher voltage/current ratings

## E- Option Model Features (Keypad, Encoder, Ethernet)

- Digital Encoder \& Full

Functional Keypad for real-time programmatic control

- Ethernet and RS-485 available for system-level expansion \& integration
- Standard Tracking Feature for
 multi-channel synchronized control
- USB-only Interface available

- More Choices - the only linear supply providing up to $350 \mathrm{Vdc}, 50 \mathrm{Adc}$ @ maximum power of up to $1.75 \sim 2 \mathrm{~kW}$ in a single 4 U 19 " inch rackmount box
- More Flexibility - customize the voltage/power/current rating of numerous single supplies and combine them into a single system with up to 8 channels per 4 U box
- More Expandability - Master/Slave Parallel multiple identically-rated systems \& control up to 32 channels as a single unit via one GPIB, RS-232, or RS-485 address

*1: All electronic specifications are represented at the full operating temperature range for all models.
*2: The programming and readback resolutions are based on 16 bit resolution design.
*3: Load regulation specifications are for 10-90\% load changes.
*4: Line regulation specifications are for input voltage variation over the AC input voltage range with constant rated load. *5: Ripple and Noise (PARD) specifications are for $10-100 \%$ output voltage and full output current.

[^2]
## for PD LINEAR POWER SUPPLIES

Please Note: All full rack units come standard with rack mounting ears.
*When assembled the RM-03 rack shelf adds approximately 3 mm to the 4 U height, resulting in 5 U of required rack space. If space is limited to 4 U , use the RMP-04.
**The RMP-04 must be factory assembled and requires a full rack width for mounting.

## Configuration 1

## Configuration 2

## Parallel System Network Solution Utilizing

 the SPS 1.2kW V-Panel Switch Mode Power Supply
## Features Include:

Simple Parallel Integration

- Parallel units in groups and control as a single unit
- Auto-current balancing to share load equally
- Complete Parallel Commands for System-level parallel configuration

Reliability, Connectivity and Hassle-free Maintenance

- Front and Side air vents for optimized air flow
- RS-232, GPIB and Ethernet (Option) connectivity to PC
- Closed-cased calibration without removing the unit from rack

## Configuration 3

 purchasing expensive higher-powered equipment

- Closed-cased calibration without removing the unit from rack

## Configuration 4: <br> Unlimited Ethernet Connectivity Solution

## MCU-2 Features:

Expandability, Reliability \& Scalable Systems

- Ethernet connectivity allows wired or wireless control of power systems
- Easily build isolated Instrumentation Networks of power supplies without the dangers of unauthorized access
- Integrate new units into system via simple Ethernet protocols and DHCP

## Flexible Systems and System Integration

- Only a single GPIB, RS-232, USB or Ethernet connection is required for remote PC control
- SCPI commands and unique addressing methods allow simple system integration and application programming
- Control up to 800+ AMREL Ethernet Power Supplies with added MCU-2 Controllers

## ePawer MODIFICATIONS AND CUSTOMIZATIONS

AMREL's goal is to meet your instrumentation needs through standard, modified or custom product designs. In many cases, minor modifications may be proposed with little or no NRE. Whether it's a simple color change or a Electrical/Mechanical re-design, AMREL's engineering team can provide the solution.

AMREL is acutely aware that a customer's requirements may call for non-standard specifications. Our team of engineers leads the industry in providing custom power supply solutions from concept to integration. Ask us about our customized solutions program if your requirements cannot be met with a standard or modified ePower supply. We will review your specification and provide you with a complete technical concept including technical data and drawings. Whether your application calls for a low-power or highpower switch mode or linear power supply, you can be assured AMREL's team will provide the most effective yet economical solution available.

## Below are samples of customizations and/or modifications available through AMREL's Custom Solutions Program.

- Non-standard Voltage and Current Output Ranges.
- Lower Ripple Noise (via additional filtering).
- Higher Programming/Readback Resolutions.
- Crowbar OVP Circuitry.
- Multiple Outputs in One Chassis.
- Non-standard I/O Connectors.
- Non-standard Front Panel Layouts.
- Increased Power Density Up to 1500W in a 1U High

SPRT - This fully customized switch mode power supply is packaged in a 1 U high form factor, weighing approx. 10lbs. (net weight). The SPRT includes front panel I/O and ac input connectors.

PDS - The PDS is a full rack, multiple channel linear power supply.

SPDC1001 - This unit has two (2) 300 Watt outputs with different voltage and current ratings, packed in a 1 U high chassis. The outputs are controlled via trimmer pots.

SPSX was developed for the Lockheed Martin LMSTAR Test Station. Changes to AMREL's standard SPS were made to meet the following requirements: One GPIB interface with only one address for the entire system. The power supplies were daisy chained to the master controller via a RS-485 Bus (Now standard). In addition, each power supply required built-in relays for polarity reversal and output isolation.

SPS 1.5kW - This unit packs 1500 Watt of output power in a 1 U high chassis. It has a 208Vac-3Phase input, and includes GPIB and RS-232 Interfaces

## Requesting a quote or ordering a productAMREL MAKES IT SIMPLE

## AMREL's Commitment to SERVICE and TECHNICAL SUPPORT has been

 adopted as a Corporate Mandate and an unwavering pledge to our customers.AMREL knows that in this fast paced, high tech world, our customers have different requirements and preferences, that's why we have developed not only the most flexible product lines on the market today, but also flexible means in which our customers can communicate their needs to AMREL.

## REQUESTING A QUOTE:

For customers who prefer speaking with a real person (and not a machine) Call 1(800) 654-9838 within the U.S., between 8am-5pm pacific time M-F or 1(626) 443-6818 for International calls.
Just have time for a quick e-mail
Send your request for a quote to ariinfo@amrel.com - you will usually receive a response the same day, but no later than 24 hours.

If you are visiting AMREL's website at www.amrel.com and would like a quote
Go to the power products section of AMREL's website. Simply click on the Request Information button located in the left margin and complete the Request Form. To expedite processing, verbal or email requests are preferred.

Would you like to speak with a representative in your area?
Go to www.amrel.com and click on the power products section - click on the Contact Us button to locate the appropriate AMREL representative.

## CUSTOM/SPECIAL PRODUCT REQUESTS:

The same options for "Requesting a Quote" apply to "Custom/Special Product Requests". In addition, you will find a Request Customization button in the right margin of the power products web pages. Simply complete this form and submit - you will receive a response within 24 hours (M-F).

## ORDER PLACEMENT:

Once you have received your quote, placing an order is simple.
There are two easy methods to choose from in placing an order:

1) Call AMREL direct at 1-800-654-9838 within the U.S or 1 (626) 443-6818 for International.
2) Submit your Purchase Order to AMREL by Faxing to 1(626) 443-8600 (U.S. or International), or E-mail to ariinfo@amrel.com, and then mail the hard copy to - American Reliance Inc, Attn: Sales Department, 3445 Fletcher Ave, El Monte, CA 91731
${ }^{* * * * *} A M R E L$ will provide an acknowledgement once your order has been verified and processed*****

## ADDITIONAL INFORMATION:

Payment Terms: AMREL accepts Master Card, Visa Card, American Express, or NET 30 Terms approved accounts for domestic purchases. For international purchases, items must be paid for in advance via wire transfer or a Letter of Credit may be submitted. NET 30 Terms may be granted in some cases.

GSA Ordering: AMREL's products are listed under GSA Contract Number: \#GS-24F-9037H. Please reference this number when placing an order under this contract.

Product Service and Support: In addition to providing quality products at competitive prices, it is AMREL's contention that after-sale Customer Support is what really makes the difference in developing and maintaining long-term, mutually rewarding relationships with your valued customers. Please contact our Technical Support Staff at 1-800-654-9838 for product servicing requests or technical questions.

## Additional AMREL Products

AMREL'S eLnad line includes five series' of programmable electronic loads:

## PLA Series of Air-Cooled Loads

- Market's Widest Selection of Available Models: 800W, 1.5kW, 2kW, 2.5kW,3kW, 4kW, 5kW, 7.5kW, 10kW, 20kW
(up to $100 \mathrm{~kW}+$ available upon request), up to 1000 V and 2000A - Ultra-low Range Available
- Low-voltage Operation
- Closed-case Calibration
- Individual FET Protection
- Co-resident GPIB IEEE-488/RS-232 (Standard)
- USB and Embedded Ethernet Interfaces Available
- Oscillation Protection
- Five Operating Modes: CC, CR, CV, CP and Pulse
- Programmable Protection: OV/UV/OC/UC/OP/UP
- Dynamic Power Profiling (store up to 4 profiles)

## PLW Series of Water-Cooled Loads

- Market's Widest Selection of Available Models: $6 \mathrm{~kW} / 9 \mathrm{~kW} / 12 \mathrm{~kW} / 18 \mathrm{~kW}(2 \mathrm{U}) 24 \mathrm{~kW} / 36 \mathrm{~kW}(4 \mathrm{U})$ (up to $100 \mathrm{~kW}+$ available upon request), up to 1200 V and 3000 A (5000A Upon Request) Ultra-low Range Available
- Low-voltage Operation
- Closed-case Calibration
- Individual FET Protection
- Co-resident GPIB IEEE-488/RS-232 (Standard)
- USB and Embedded Ethernet Available
- Oscillation Protection
- Condensation Protection
- Highest Power Dissipation Density
- Five Operating Modes: CC, CR, CV, CP \& Pulse
- Programmable Protection: OV/UV/OC/UC/OP/UP
- Dynamic Power Profiling (store up to 4 profiles)

LPL Series of Low-Profile Air-Cooled Loads

- Available 600 W Models: $60 \mathrm{~V}, 120 \mathrm{~V}, 400 \mathrm{~V}, 600 \mathrm{~V}$ (all 1 U high and Zero Stackable)
- Ultra-compact Design (1U)
- Low-voltage Operation
- Closed-case Calibration
- Individual FET Protection
- Full Front Panel Control
- GPIB IEEE-488/RS-232 (Standard)
- USB and Embedded Ethernet Available
- Oscillation Protection
- Dynamic Power Profiling (store up to 4 profiles)
- Programmable Protection: OV/UV/OC/UC/OP/UP

PEL Series of Low-Power Air-Cooled Loads

- Available Models: 60W, 150W, 300W, 600W
- Wide Range of Models
- Low-voltage Operation
- Closed-case Calibration
- GPIB IEEE-488 and RS-232 (Standard)
- Dynamic Power Profile (99 Points)
- Five Modes of Operation: CC, CR, CV, CP and Pulse
- Programmable Protection: OV/UV/OC/UC/OP/UP

FEL Series of Low-Voltage Air-Cooled Loads

- Available Models: 60W, 150W, 300W
- Ultra-low Voltage Operation
- Closed-case Calibration
- Co-resident GPIB IEEE-488/RS-232 (Standard)
- Dynamic Power Profile (99 Points)
- Full Front Panel Control
- Five Modes of Operation: CC, CR, CV, CP and Pulse
- Programmable Protection: OV/UV/OC/UC/OP/UP

## Customization and Modification Available.

Additional products available that are not listed above include:
Zero-volt Load (ZVL) -1/2 rack 4U box 40Adc (100W/200W), full rack 4U box 80Adc(300W), customized ratings available.
Frequency Response Analyzer (FRA) - at under \$5k, for many applications AMREL's FRA is a low cost, fully functional alternative to other high priced (up to $\$ 20 \mathrm{k}$ ) FRA's on the market.

[^0]:    *1: All electronic specifications are represented at the full operating temperature range for all models.
    *2: The programming and readback resolution is based on 16 bit resolution design.
    *3: Load regulation specifications are for 10-90\% load changes.
    *4: Line regulation specifications are for input voltage variation over the ac input voltage range with constant rated load.
    *5: Ripple and Noise specifications are for $10-100 \%$ output voltage and full output current.
    *6: Time for output voltage to recover within $+/-0.5 \%$ of $V_{\text {FULL-SCALE }}$ following a $10 \% \sim 60 \%$ load current change.

[^1]:    *7: Programming speed specifications are for 50\% of full current loading.
    *8: Temperature coefficent specifies output change per ${ }^{\circ} \mathrm{C}$ in ambient temperature rise following 30 minute warm up, w/ constant line and load.
    *9: AC Input is fixed and factory configured to either 120Vac: 103.5 ~ 126.5Vac or 208Vac: 187 ~ 229Vac or 230Vac 207~253Vac @ 50/60Hz.

[^2]:    *6: Time for output voltage to recover to within + /- $0.5 \%$ of $V_{\text {FULL-sCALE }}$ following a $10 \% \sim 60 \%$ load current change.
    *7: Programming speed specifications are for $50 \%$ of full current loading.
    *8: Temperature coefficient specifies output change per ${ }^{\circ} \mathrm{C}$ in ambient temp. rise following 30 min . warm up, w/ constant line \& load.
    *9: AC Input is fixed and factory confgured to either 103.5~126.5Vac or 207~253Vac @ 50/60 Hz.
    *10: Over-voltage Protection, Readback \& Programming Accuracy, Load/Line Regulation and CV/CC Dritt are specified as Reading/Setting + Full Scale.
    *11: Dual Channel PD Models are also available.
