# /inritsu

# **MS8609A** Digital Mobile Radio Transmitter Tester 9kHz to 13.2 GHz

# Measures Wideband Signals up to 20 MHz

The MS8609A Digital Mobile Radio Transmitter Tester has a built-in spectrum analyzer, modulation analyzer, and power meter. One tester supports all the measurements needed to develop and manufacture base stations and mobile stations as well as to construct and maintain base stations. The spectrum analyzer resolution bandwidth of 20 MHz readily supports measurement of wideband signals. The modulation analyzer uses high-speed DSP to support all Vector Signal Analysis (VSA) functions. Power can be measured with an accuracy of ±0.4 dB using the amorphous power sensor. Up to three dedicated measurement software options for W-CDMA, GSM/EDGE, etc., can be installed simultaneously and input signals can be selected from either RF or I/Q. Balanced or unbalanced input can also be selected for I/Q signals. Remote measurement is supported by GPIB, RS-232C and 10Base-T (optional) interfaces and the 120 kbyte/s speed of the GPIB I/F supports high-speed measurement on production lines. The screen uses an easy-to-read 6.5-inch TFT color LCD.

### Spectrum Analyzer Functions

### Frequency

Frequency range: 9 kHz to 13.2 GHz Resolution bandwidth: 300 Hz to 3 MHz, 5 MHz, 10 MHz, 20 MHz (to 3 GHz) Frequency span: Zero, 1 kHz to 13.2 GHz Span accuracy:  $\pm 1\%$ Reference frequency accuracy:  $\pm 2 \ge 10^{-8}$ /day,  $\pm 5 \ge 10^{-10}$ /day (option) Level Maximum input level:  $\pm 20$  dBm Input attenuator: 0 to 62 dB (2 dB steps) 1 dB gain compression:  $\pm 3$  dBm ( $\ge 500$  MHz) Two tone 3rd order distortion:  $\leq -85$  dBc (0.1 to 3.2 GHz) Sweep Frequency span: 10 ms to 1000 s

Time span: 1 µs to 1000 s Refresh rate: >20 times/s

### Others

Detection mode: Normal, positive, negative, sample, average, RMS (option) Measurement functions: Frequency counter, noise power, C/N, ACP, OBW, etc. GPIB transmission speed: 120 kbyte/s

Hell

on guide

## **MS8609A Panel Layout**

- F1-F6: Function for selecting software menus on screen
- **Spectrum**: Switches to spectrum analyzer mode
- TX Tester: Runs measurement software in transmitter test mode
- Freq/Ampl: Main function for setting frequency, span and amplitude
- Marker: Switches to normal marker as well as multimarker, zone marker, zone sweep, etc.
- System: Selects measurement software in transmitter test mode
- Entry: Inputs alphanumeric values and units
- ③ Save/Recall: Saves/recalls measurement conditions and waveforms to/from internal memory and memory card
- Measure: Executes calculations based on waveform data at high speed without external computer
- Coupled Function: Sets non-main functions Usually used at auto setting values
- Memory Card: Slot for memory card for saving/recalling measured waveforms and measurement parameters
- I/Q Input: Selects balanced or unbalanced input
- Input: Input for signal with max. power of +20 dBm
- Probe Power: ±12 V power connector for FET probe

- IF Output: Output for IF signal band-limited by RBW
- Wideband IF Output: Output for IF signal before passage through RBW
- 10 MHz/13 MHz Ref In: 10/13 MHz external reference signal input
- 10 MHz Ref Out: 10 MHz external reference signal output
- Sweep (X): Output for X-axis signal proportional to sweep output
- Video (Y): Output for Y-axis signal proportional to video detection output
- SWP Status: Sweep status signal output
- Trig/Gate In: Input for external trigger/gate signal (±10 V)
- Parallel: Connector for printer
- VGA Out: Output for VGA signal
- Ethernet: For remote control via 10BASE-T Ethernet
- GPIB: For remote control via GPIB
- Ø RS-232C: For remote control via RS-232C I/F

## Supports W-CDMA

### MX860901B W-CDMA Measurement Software (sold separately)

### **Measurement functions**

Modulation analysis: Carrier frequency, vector error, phase error, magnitude error

Code domain analysis: Code domain power, code domain error, peak code domain error

Amplitude measurement: Transmitter power, transmitter power control

Code vs time measurement

- Demodulation measurement
- CCDF measurement
- Adjacent channel power measurement
- Occupied bandwidth measurement
- I/Q level measurement

### Performance

Modulation accuracy: Residual vector error (rms): 1% (typical)

Adjacent channel power measurement (filter method): ≥55 dBc (5 MHz offset), ≥62 dBc (10 MHz offset)

Adjacent channel power measurement (sweep method, typical):

68 dBc (5 MHz offset), 75 dBc (10 MHz offset)

### Modulation Accuracy Measurement

The modulation accuracy of base station and mobile equipment can be measured and modulation of multiple waveforms can be analyzed. The residual vector error (rms) accuracy is high (1%, typical).

### **Parameter Setup**

Measurement parameters, such as modulation accuracy, code domain power, etc., are set on the screen shown below. Measurement is performed simply via a soft-key menu after setting measurement parameters.

### **Code Domain Power**

Only 1.5 seconds are required for measurement. Either automatic detection of scrambling code from SCH, or specification of scrambling code can be selected.

### **Demodulation Data Monitoring Function**

After de-spreading, up to 10 frames of demodulation data can be evaluated.

### I/Q Level Measurement

Each I and Q input voltage (rms, p-p value) can be measured and displayed in dBmV or mV units.

### **CCDF Measurement**

This supports distribution or cumulative distribution display of the power difference between instantaneous power and average power. The 20 MHz max. filter bandwidth supports multi-carrier measurement.

### **Power Meter Function**

The built-in power meter uses an amorphous power sensor and the measurement accuracy is very high (±0.4 dB).

# Supports GSM, EDGE

### MX860902A GSM Measurement Software (sold separately) **Measurement functions** Modulation analysis: Carrier frequency, phase error (RMS, peak), magnitude error \*Filter selection complies with ETSI standards (for EDGE modulation analysis) Amplitude measurement: Transmitter power Measurement of rise/fall edge characteristics of antenna power Output RF spectrum measurement Spurious measurement I/Q level measurement Performance Modulation accuracy Residual phase error: <0.5° (rms) [GMSK modulation] Residual EVM: <1.0% (rms) [8PSK modulation] Transmitter power: ±0.4 dB

### **Parameter Setup**

Measurement parameters, such as GMSK modulation for GSM and 8PSK modulation for EDGE are set on the screen shown below. Measurement is performed simply via a soft-key menu after setting the measurement parameters.

### **Modulation Accuracy Measurement**

The modulation accuracy is high. (The residual phase error of GMSK modulation is <  $0.5^{\circ}$  rms and residual EVM of 8PSK modulation is < 1.0% rms.)

### **Transmitter Power Measurement**

The screen displays the amplitude waveforms and template simultaneously with symbols on the horizontal axis and level on the vertical axis.

### **Output RF Spectrum Measurement**

The output RF spectrum can be measured at high speed and simply.

The following screen shows the constellation display for the 8PSK modulation through a Nyquist filter and Gaussian inverse correction filter.

## Supports cdmaOne and CDMA2000 1xRTT

### MX860903A cdma Measurement Software (sold separately)

### **Measurement functions**

Modulation analysis:

Carrier frequency, vector error, phase error, magnitude error

Code domain analysis:

Code domain power, code domain timing offset, code domain phase offset

Amplitude measurement: Transmission power

Spurious close to the carrier measurement

Spurious measurement

Occupied bandwidth measurement

I/Q level measurement

### **Parameter Setup**

A setup screen is provided for input of required parameters for modulation accuracy and code domain power measurements in cdmaOne or CDMA2000 1xRTT analysis. Measurement can be performed after parameter setup.

### **Modulation Accuracy Measurement**

Frequency error, modulation accuracy and code domain analysis are performed and the results are displayed on the screen. The measurement accuracy is 1% (typical) for residual vector error (rms).

### **BTS Code Domain Analysis**

Only 2 seconds are required for code domain analysis of 1xRTT signals. RC1\* through RC5 can be measured. The spreading factor of each code is detected automatically and displayed on the screen. \*Radio Configuration

### MS Code Domain Analysis

Code domain analysis of 1xRTT signals in RC3 and RC4 can be performed in only 2 seconds. Code domains of I/Q phase are displayed on the screen.

### **Transmission Power Measurement**

When transmission power is measured, both the value and signal waveform are displayed on the screen. High powers are measured accurately using the built-in power meter function.

### **Spurious Close to Carrier Measurement**

Spurious close to the carrier is measured using the spectrum analyzer function. The PASS/FAIL result of template evaluation is displayed on the screen.

### **Spurious Measurement**

A frequency table can be set at spurious measurement to provide PASS/FAIL results. Fifteen different frequencies and their limit values can be input.

### Supports PDC, PHS and NADC All-in-one Evaluation of π/4DQPSK transmission systems

### MX860905A π/4DQPSK Measurement Software (sold separately)

### **Measurement functions**

### Modulation analysis:

Carrier frequency, vector error, phase error, magnitude error

#### Amplitude measurement:

- Transmitter power, carrier-off leakage power, rise/fall characteristics
- Adjacent channel power measurement

Spurious measurement

Occupied bandwidth measurement

I/Q level measurement

General purpose measurement

### **Parameter Setting**

Analysis of PDC, PHS and NADC (IS-136) systems requires setting of parameters for important measurement such as modulation accuracy at this screen. Changing the symbol rate also permits analysis of systems other than PDC, PHS and NADC.

### **Modulation Accuracy Measurement**

The constellation display is combined with the modulation accuracy measurement results to monitor the residual vector error (rms) with a high accuracy of 0.5 % (PDC).

### **Transmitter Power Measurement**

This screen displays the transmitter power and waveform. The power value is calibrated by the built-in power meter to achieve even higher power measurement accuracy.

### **Transmission Timing Measurement**

This screen displays the PHS send timing. In addition, when average measurement is selected, the send jitter is also displayed.

### **Occupied Bandwidth Measurement**

The occupied bandwidth is measured with the spectrum analyzer function or by FFT using DSP, and displayed.

### **Adjacent Channel Power Measurement**

When measurement is performed using the spectrum analyzer, the adjacent channel power is measured after passage through the built-in filter (root Nyquist). Highspeed measurement can also be selected.

### **Spurious Measurement**

There are three spurious measurement methods: Spot, Sweep and Search. Up to 15 frequency and limit values can be set in the tables. Measurement results are displayed with a limit evaluation.

### Option 08: Pre-amplifier

| Gain         | 20 dB typical  |
|--------------|--|
| Noise figure | 6.5 dB typical (input frequency: ≤2 GHz),12 dB (input frequency: >2 GHz)   |
| Frequency    | Frequency range: 100 kHz to 3 GHz<br>Band<br>0: 100 kHz to 3.0 GHz, 1–: 3.15 to 6.3 GHz, 1+: 6.2 to 7.8 GHz, 2+: 7.7 kHz to 13.2 GHz<br>*Only Band 0 supports pre-amplifier  |
| Amplitude    | Level measurement: Average noise level to +10 dBm<br>Max. input level: +10 dBm<br>Average noise level: −137 dBm + 2.0 x f [GHz] dB (1 MHz to 2.5 GHz, Band 0)<br>*At RBW 300 Hz, VBW 1 Hz, RF ATT 0 dB, and Sample detection mode<br>Reference level<br>Setting range<br>Log scale: -120 to +10 dBm, or equivalent level<br>Linear scale: 2.24 µV to 707 mV<br>Reference level accuracy: ±0.90 dB (-69.9 to +10 dBm), ±1.50 dB (-90 to -70 dBm)<br>*After calibration, referenced to 50 MHz, 1 MHz span (RF ATT, RBW, VBW, and sweep time set to AUTO)<br>RBW Switching uncertainty: ±0.5 dB (300 Hz to 5 MHz), ±0.75 dB (10 MHz, 20 MHz)<br>*After calibration, referenced to RBW 3 kHz<br>RF ATT switching uncertainty: ±0.5 dB (10 to 50 dB), ±1.0 dB (52 to 62 dB)<br>Frequency response: ±2.0 dB (100 kHz to 3 GHz)<br>*Referenced to 100 MHz, when RF ATT = 10 to 50 dB, and temperature = ±18° to ±28°C<br>Linearity of waveform display<br>Log scale (after calibration):<br>±0.5 dB (0 to -20 dB, RBW ≤1 kHz), ±1.0 dB (0 to -60 dB, RBW ≤1 kHz), ±1.5 dB (0 to -75 dB, RBW ≤1 kHz)<br>Linear scale (after calibration):<br>±0.5 dB (0 to -20 dB, RBW ≤1 kHz), ±1.0 dB (0 to -60 dB, RBW ≤1 kHz), ±1.5 dB (0 to -75 dB, RBW ≤1 kHz)<br>Linear scale (after calibration):<br>±0.5 dB (0 to -20 dB, RBW ≤1 kHz), ±1.0 dB (0 to -60 dB, RBW ≤1 kHz), ±1.5 dB (0 to -75 dB, RBW ≤1 kHz)<br>Linear scale (after calibration):<br>±0.5 dB (0 to -20 dB, RBW ≤1 kHz), ±1.0 dB (0 to -60 dB, RBW ≤1 kHz), ±1.5 dB (0 to -75 dB, RBW ≤1 kHz)<br>Linear scale (after calibration):<br>±0.5 dB (0 to -20 dB, RBW ≤1 kHz), ±1.0 dB (0 to -60 dB, RBW ≤1 kHz), ±1.5 dB (0 to -75 dB, RBW ≤1 kHz)<br>Linear scale (after calibration): ±5% (relative to reference level)<br>Spurious response: Two-tone 3rd order distortion: ≲-70 dBc (10 MHz to 3 GHz)<br>*Frequency difference of two signals ≥50 kHz, at pre-amplifier input level*1 of -55 dBm<br>1 dB gain compression: ≥-35 dBm (input frequency ≥100 MHz) *At pre-amplifier input level*1<br>Input impedance: VSWR ≤2.5 typical |

\*1: Pre-amplifier input level calculated as Pre-amplifier input level = RF input level – RF ATT setting level

### Option 09: Ethernet Interface

| Function  | Control by external controller (except power switch) |
|-----------|--|
| Connector | 10BASE-T   |

### Option 30: LPF for 2 GHz Band Carrier Cut

| Function                        | Suppresses distortion in spectrum analyzer by carrier wave (1.8 to 2 GHz) at W-CDMA low-frequency band spurious measurement<br>*Option 08 cannot be installed simultaneously. |
|---------------------------------|---|
| Frequency range                 | 9 kHz to 3.2 GHz (LPF: OFF), 9 kHz to 1.0 GHz (LPF: ON)   |
| LPF attenuation characteristics | ≤–20 dB, –30 dB typical, at 1.8 to 2.2 GHz  |
| Average noise level display     | [LPF: ON]<br>≤–122 dBm + 2.0 x f [GHz] dB (1 MHz to 1.0 GHz, band 0)<br>*RBW: 300 Hz, VBW: 1 Hz, RF ATT: 0 dB   |
| Frequency response              | [LPF: ON]<br>±1.0 dB (9 kHz to 1.0 GHz, band 0)<br>*Referenced to 50 MHz, when RF ATT = 10 dB, and temperature = +18° to +28°C  |

#### Option 31: Low Noise Floor

| Function                       | Used to decrease floor noise in frequency band 2+                         |
|--------------------------------|---|
| Average noise level<br>display | ≤–112 dBm (7.7 to 13.2 GHz, band 2) *RBW: 300 Hz, VBW: 1 Hz, RF ATT: 0 dB |

### Option 32: Maximum Input Level Extension

| •                              | •  |
|--------------------------------|--|
| Function                       | Extends measurement level range to +26 dBm   |
| Max. input level               | +30 dBm (1 W), continuous wave average power   |
| Power meter function           | Level range: -14 to +26 dBm  |
| Spectrum analyzer<br>amplitude | Setting range<br>Log scale: -100 to +40 dBm or Equivalent level<br>Linear scale: 22.4 µV to 22.4 V<br>Reference level accuracy:<br>±0.75 dB (+0.1 to +30 dBm), ±0.5 dB (-49.9 to 0 dBm), ±0.75 dB (-69.9 to -50 dBm), ±1.5 dB (-80 to -70 dBm)<br>*After calibration, with 50 MHz frequency at 1 MHz span (RF ATT, RBW, VBW, and sweep time set to AUTO) |

#### Option 33: High Accuracy Power Measurement

| Function                             | Improves power measurement accuracy without using internal power meter when MX860901A W-CDMA measurement software is used |
|--------------------------------------|---|
| Frequency range                      | 1848 to 2171 MHz (Except 1995 to 2105 MHz)  |
| Transmission power measurement range | -50 dBm to +20 dBm (average power)  |
| Reference level                      | -10 dBm to +20 dBm  |
| Transmission<br>power accuracy       | ±0.4 dB<br>*At reference input level, +25°±3°C, input ATT: AUTO, after calibration and except mismatch error              |
| Power measurement linearity          | ±0.2 dB (0 to −40 dB)<br>*Input level: ≥−10 dBm, at range optimization and no change of reference level setting.          |
| Temperature coefficient              | 0.015 dB/°C   |
| Accessories                          | ATA flash memory card   |
| Calibration interval                 | Six months  |

### Option 34: 4 GHz Lo Output

| Outline  | Outputs internal 4 GHz Lo signal to BNC connector on back panel   |
|----------|---|
|          | Frequency: 4 GHz  |
| Function | Frequency accuracy: ±(4 GHz x reference frequency accuracy) ±1 Hz |
|          | -10 dBm (typical)   |
| Spurious | ≤-40 dBm  |

### • Option 36: Power Meter Hi Limit Frequency Expansion (6 GHz)

| Outline                    | Extends power meter hi limit frequency to 6 GHz |
|----------------------------|---|
| Frequency range            | 3 to 6 GHz                                      |
| Level range                | -20 to +20 dBm                                  |
| Measurement level accuracy | ±10% (after zero calibration)                   |

### • Option 37: Power Meter Hi Limit Frequency Expansion (6 GHz) (retrofit option)

| -                          |   |
|----------------------------|---|
| Outline                    | Extends power meter hi limit frequency to 6 GHz |
| Frequency range            | 3 to 6 GHz                                      |
| Level range                | -20 to +20 dBm                                  |
| Measurement level accuracy | ±10% (after zero calibration)                   |

#### Option 46: Auto-Power Recovery

| Function |
|----------|
|----------|

### Option 47: Rack Mount (IEC)

| Function For EC standard-compatible rack; tilt handle removed when mounted |  |
|--|--|
| Option 48: Rack Mount (JIS)  |  |
| Function   | For JIS standard-compatible rack; tilt handle removed when mounted |

# **Ordering Information**
