## Dual Range DC Power Supplies Models 1737 & 1747

B&K Precision's models 1737 and 1747 are general purpose dual range DC power sources. These power supplies can output higher voltage at a lower current range or more current at a lower voltage range. Two 4-digit LED displays continuously monitor the output voltage and current. The power supplies can be operated locally from the front panel or remotely through the RS-232 interface.

The 1737 and 1747 both exhibit excellent regulation and low ripple characteristics. Their mechanical configuration conserves bench space and allows for easy portability.

These power supplies are well-suited for a wide variety of electrical and electronics applications in service shops, engineering labs, production, school laboratories, and home use.

### Features and Benefits

- Dual range to accommodate applications requiring either a higher voltage or a higher current
- Low ripple and noise

### Front Panels

#### Two Power Supplies in One

The 1737 and 1747's unique dual range feature offers the best of both worlds by supplying two different ranges with either higher voltage or more current depending on your application, avoiding the higher cost of buying more power than necessary.

### Rear Panels

RS-232 interface enables the instrument to be remotely controlled via PC

### Software Application

Utilize B&K Precision's application software, available for download at [www.bkprecision.com](http://www.bkprecision.com). This software provides a virtual front panel and a simple data logging function to store and log data to a text or CSV file.
