

# U2300A Series USB Modular Multifunction Data Acquisition Devices

## Introduction

The Keysight Technologies, Inc. U2300A Series USB Modular Multifunction Data Acquisition (DAQ) devices offer a high-performance PC data-acquisition solution. The U2300A Series DAQ devices consist of two families: the basic multifunction DAQ comes in four models while the high density multifunction DAQ is made up of three models. The U2300A Series DAQ devices applications extend across industrial and education environments. Extending across industrial and education environments, the U2300A series DAQ with fast sampling rates is well suited for research and development, manufacturing as well as design validation designers.

## Features

- Up to 3 MSa/s sampling rate for a single channel
- Functions as a standalone or modular unit
- Easy to use: Plug-and-play and hot swappable with Hi-Speed USB 2.0
- Up to 384 channels when incorporated into U2781A modular product chassis
- Easy-to-use bundled software for quick setup and data logging to PC
- 12-bit or 16-bit analog-to-digital (A/D) resolution
- 24-bit programmable digital input/output
- Self-calibration capability
- Compatible with a wide range of Keysight Development Environments (KDEs)
- USB 2.0 and USBTMC-USB488 standards
- NEW! Control, automate and simplify with Keysight BenchVue software. Now included.

**Notice:** The U2300A Series will be discontinued on June 1, 2024. The last day to place order for this product is May 31, 2024. Keysight will continue to provide world-class support for this product for the standard period of 5 years.

## High sampling rate

The U2300A Series DAQ devices can generate sampling rates of up to 3 MSa/s for a single channel. When multiple channels are configured, the device can sample data up to 1 MSa/s. The fast sampling capability allows users to perform intermittent detection easily. This is ideal when dealing with high density analog input/output signals especially when juggling between different input ranges and sampling requirements.

## Flexible standalone or modular capability

The U2300A Series DAQ devices are uniquely designed with the flexibility to function as a standalone unit or as a part of a modular unit. When used together with the U2781A modular product chassis, the devices has the capability to support up to 384 channels.

## Flexible system and control options with polling and continuous mode

The U2300A Series DAQ devices have two modes, polling mode and continuous mode. Selecting continuous mode enables you to acquire data continuously once the trigger signal is received.

## Arbitrary waveform

Designed to support arbitrary waveforms, the U2300A Series allows you to generate arbitrary waveform via SCPI commands.

## Burst mode

Equipped with the burst mode, the enhancement feature enables simultaneous mode for analog input acquisition. Now you can perform sampling measurement up to the highest possible speed of the DAQ.

## Trigger sources

U2300A Series offers various trigger options from immediate trigger (none), analog/external digital trigger, System Synchronous Interface (SSI)/ Star trigger and Master/Slave trigger sources. These entire trigger options has the capability to configure trigger sources during A/D and digital-to-analog (D/A) operations. Selecting the slave trigger and SSI/Star trigger are recommended when the USB modules are used together with the U2781A USB modular product chassis.

## Predefined function generator

Aside from supplying DC voltage, the two analog output channels are capable of generating common and predefined waveforms such as sinusoidal wave, square wave, triangle wave, sawtooth wave and noise wave.

| FIFO buffer size                      | Up to 8 MSa                                                                      |        |           |        |

<sup>1</sup> When multiple channels are used, the sampling rate of each channel is the maximum sampling rate divided by the number of channels used.

<sup>2</sup> System Synchronous Interface (SSI) and Star trigger commands are used when modular devices are used in the product chassis.

<sup>1</sup> Maximum external reference voltage for analog output channels (AO\_EXT\_REF) is  $\pm 10$  V.

<sup>2</sup> System Synchronous Interface (SSI) and Star trigger commands are used when modular devices are used in the product chassis.

<sup>1</sup> When multiple channels are used in the U2355A or U2356A, the sampling rate of each channel is the maximum sampling rate divided by the number of channels used. For multiple channels used in the U2331A, the sampling rate of each channel = (1 MSa/s) / number of channels used.

<sup>2</sup> System Synchronous Interface (SSI) and Star trigger commands are used when modular devices are used in the product chassis.

<sup>3</sup> Maximum external reference voltage for analog output channels (AO\_EXT\_REF) is  $\pm 10\text{ V}$ .

<sup>2</sup> Accuracy = ± [% of |Gain error/Output value| + Offset voltage]

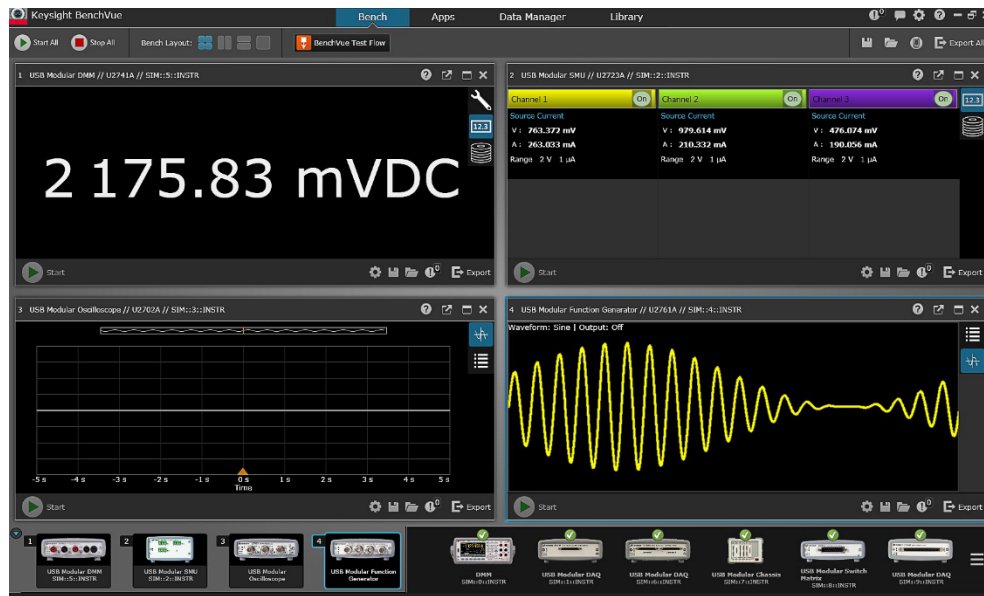

## USB Modular DAQ App within BenchVue

BenchVue software for the PC makes it simple to connect, control, capture and view multiple Keysight instruments simultaneously with no additional programming. You can derive answers faster than ever by easily viewing, logging and exporting measurement data and screen images with a few clicks from a single environment.

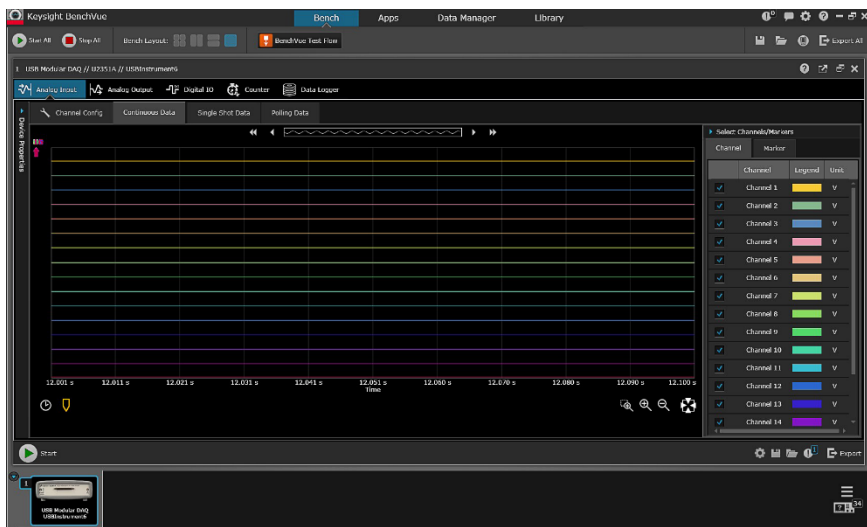

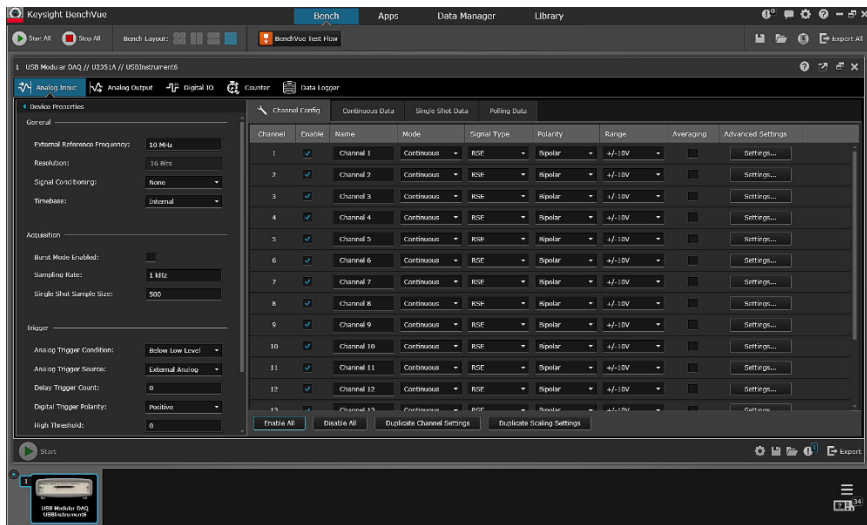

- Visualize multiple measurements simultaneously
- Easily log data, screen shots and system state
- Rapidly prototype custom test sequences
- Recall past states of your USB Modular DAQ device to replicate results
- Export measurement data in the desired format fast
- Quickly access manuals, drivers, FAQs and videos

The USB Modular DAQ App within BenchVue allows you to quickly configure and control any of the USB DAQ devices to perform data logging and visualize measurements. With six different display options, including grids and strip charts, zooming in to details the way you want is so much easier—so you can nail that measurement error in no time. In just a few clicks, you can also record measurements and export results to popular PC-friendly applications such as Microsoft Excel and Microsoft Word for further analysis.

Get started with BenchVue, downloadable at no cost at [www.keysight.com/find/benchvue](http://www.keysight.com/find/benchvue).

View measurements across USB DAQ, modular and bench instruments all on one BenchVue interface.

Configure and visualize measurements flexibly and easily on BenchVue's modern interface.

## Optional Accessories: U2802A Thermocouple Input Signal Conditioner

The Keysight U2802A is a 31-channel Thermocouple Input Signal Conditioner with a built-in thermistor for cold junction compensation. The U2802A converts low input voltage signals (less than  $\pm 100$  mV) from a thermocouple into an output voltage range suitable for data acquisition devices ( $\pm 10$  V). The U2802A is designed for use with the U2355A/U2356A USB Modular Multifunction DAQ device for temperature measurements with thermocouples (standalone operation only). The U2802A can be attached to the DAQ device via two SCSI-II 68 conductor cables. The thermocouple complements eight standard thermocouple types which caters to a wide range of application and industrial settings.

### Features to meet your demands

- 31 input channels that can be independently configured to either differential thermocouple input mode, single-ended voltage input mode, or differential voltage input mode using two input channels set to voltage input mode
- Supports the standard thermocouple types (J, K, R, S, T, N, E, and B) defined in the NIST ITS-90 Thermocouple Database
- Error detection for open thermocouple channels
- Built-in isothermal construction on terminal block for improved measurement accuracy
- Built-in thermistor for cold junction compensation
- Built-in zeroing function to compensate for overall system offset errors due to temperature drift and long term drift
- Up to  $\pm 10$  V input voltage range for higher voltage inputs
- Sampling rate of 500 kSa/s for overall module
- Sampling rate of 10 kSa/s total for all channels in thermocouple mode
- Quick and easy USB setup
- Robust, cost-effective, and user friendly

### Applications

The U2802A Thermocouple Input Signal Conditioner can be used in various applications, including:

- Product thermal analysis and characterization
- Environmental chamber profiling
- Process monitoring in consumer electronics markets
- Material properties testing in education environments
- Study of electronic temperature properties
- Appliances testing

## Thermocouple input mode

In thermocouple input mode, the U2802A can acquire up to  $\pm 100$  mV input signals. Each channel includes an instrumentation amplifier and a 4 Hz low-pass filter. The low-pass filter removes unwanted noise from the thermocouple wires to obtain accurate measurement data.

## Voltage input mode

Alternatively, you can select separate voltage input modes for each channel. The channel will be set to bypass the amplifier and filter, allowing up to  $\pm 10$  V input signals to be directly routed to the DAQ device analog input. The bandwidth in this mode is more than 500 kHz.

## Zero mode

In zero mode, the positive and negative inputs of the instrumentation amplifier are shorted together. The voltage measured in this mode corresponds to the offset voltage of the channel. You can subtract this offset voltage from subsequent thermocouple mode measurements to increase measurement accuracy. This mode is only applicable in thermocouple mode.

## Thermocouple compatibility

The U2802A is compatible with a wide range of standard thermocouple types defined in the NIST ITS-90 Thermocouple Database. This includes types J, K, R, S, T, N, E, and B.

## Open thermocouple detection

The U2802A includes open thermocouple detection circuitry to indicate the presence of an open thermocouple.

## Calibration EEPROM

The U2802A gain and offset calibration factors for each channel are stored in the EEPROM during factory calibration and can be retrieved prior to taking measurements. This on-board EEPROM also stores the module ID, serial number, and date of calibration for your reference. A section of the EEPROM is also allocated for you to save your calibration data.

<sup>1</sup> The overvoltage protection levels specified above indicate the maximum voltage each input pin can tolerate without resulting in any damages. However, prolonged exposure to these levels may affect device safety and reliability. Hence, it should be avoided where possible.

<sup>2</sup> On the channels configured for thermocouple mode, the TC+ and TC– pins can tolerate up to  $\pm 17$  V of differential voltage for a few minutes. However, exceeding a voltage range of  $\pm 100$  mV on these channels can cause additional current to be drawn from the device's power supply regulators, which may damage the device if multiple channels are overdriven for prolonged periods. This is the case when a voltage source is tied across the TCn+ and TCn– pin. Voltage sources greater than  $\pm 100$  mV should be tied to TCn+ and GND (floating source), or TCn+ and TCn+1+ (grounded source), and have the channels set for bypass mode.

## Thermocouples Typical Measurement Accuracy

The U2802A measurement error with U2355A or U2356A at 23 °C  $\pm$  5 °C is shown below.

## System Accuracy Specifications

The U2802A system accuracy specifications are shown in Table 1, Table 2, and Table 3. These measurements are derived from the U2802A and DAQ input accuracy specifications without including the thermocouple error. Refer to “Calculating System Accuracy” section in the Keysight U2802A 31-Channel Thermocouple Input Device User’s Guide for calculation methodology.

## Optional Accessories: U2901A/U2902A Terminal block and SCSI-II 68-pin connector with 1-meter/2-meter cable

The U2901A/U2902A is a terminal block and SCSI-II 68-pin connector with 1 meter cable or 2 meter cable that can be used conjunction with the U2300A Series and U2500A Series.

## Ordering Information

| Model  | Description                                                              |
|--------|--------------------------------------------------------------------------|
| U2351A | 16-Channel 250kSa/s USB modular multifunction DAQ                        |
| U2352A | 16-Channel 250kSa/s USB modular multifunction DAQ; without analog output |
| U2353A | 16-Channel 500kSa/s USB modular multifunction DAQ                        |
| U2354A | 16-Channel 500kSa/s USB modular multifunction DAQ; without analog output |
| U2355A | 64-Channel 250kSa/s USB modular multifunction DAQ                        |
| U2356A | 64-Channel 500kSa/s USB modular multifunction DAQ                        |
| U2331A | 64-Channel 1MSa/s USB modular multifunction DAQ                          |

## Optional accessories

| Model  | Description                                                    |
|--------|----------------------------------------------------------------|
| U2802A | U2802A 31-Channel Thermocouple Input Device                    |
| U2901A | Terminal block and SCSI-II 68-pin connector with 1-meter cable |
| U2902A | Terminal block and SCSI-II 68-pin connector with 2-meter cable |

## Other Products in the Keysight USB Modular Data Acquisition (DAQ) Family

### U2500A Series USB modular simultaneous sampling multifunction DAQ

Features:

- High analog input sampling rate coverage of up to 2 MSa/s for each channel
- High speed USB 2.0
- Simultaneous acquisition of multiple data points
- Multifunction capabilities — analog input (AI), analog output (AO), digital input output (DIO), and counter

For more information: [www.keysight.com/find/U2500A](http://www.keysight.com/find/U2500A)

## U2600A Series USB modular isolated digital I/O

Features:

- 64 opto-isolated lines that can meet demand up to 24 V
- High speed USB 2.0
- Isolation voltage of 1250 Vrms for protection from transient voltage spikes

For more information: [www.keysight.com/find/U2600A](http://www.keysight.com/find/U2600A)

## U2781A USB modular product chassis

Features:

- Expansion of channels for each modular product
- Multiple instrument synchronization
- Internal and external 10 MHz reference clock
- High-speed USB 2.0
- SSI/Star trigger bus synchronization between external trigger source and modules
