

## Multifunctional Electronic Load PLZ-4W SERIES

Capable to work with constant-current, constant-resistance, constant-voltage, constant-power, and combination of constantcurrent + constant-voltage, constant-resistance + constant-voltage mode
Rise time: $10 \mu \mathrm{~s}$ (which converts to rise and fall times) high-speed response Possible to perform actual Load simulation by sequence control function 0V input operating voltage type is available (PLZ164WA, PLZ664WA) Achieving a large capacity system using the booster unit (PLZ1004W)

# Suitable design for fuel cell, faster speed and lower voltage testing application of various devices! 

## Multifunctional Electronic Load NEW

 PLZ-4W SERIES- Capable to work with constant-current, constant-resistance, constant-voltage, constant-power, and combination of constant-current + constant-voltage, constant-resistance + constant-voltage mode
- OV input operating voltage is available (PLZ164WA, PLZ664WA)
- For transient switching operations, it is possible to set a slew rate (A/ $\mu \mathrm{s}$ ).
- Various circuit protection functions [overvoltage(OVP), overcurrent(OCP), overpower(OVP), overheat(OHP), under voltage(UVP), Reverse connection(REV)]

High-speed response and variable slewrate
The Electronic Load has been lately required to apply faster response to comply with such latest DC/DC converters with high-speed, highspeed performance.
With PLZ-4W series, a faster response of rise/ fall time as calculated conversion value with $10 \mu \mathrm{~s}$ is made possible, enabling a transient response test for the direct current and accurate reproduction of a simulation waveform as a dummy load. In addition, instead of the conventional rise/fall time settings, it also can be set with a slew rate $(\mathrm{A} / \mu \mathrm{s})$. As for the setting value, it can be varied continuously, and be possible to optimize transient control for voltage drops due to wiring inductance, constantvoltage power supply, etc., when the load current is switched on.

A A current waveform shifting by variable slew-rate

## - OV input

The 164WA and 664WA of PLZ-4W series permit a load input up to the rated current even when the Input Voltage is set for 0 V . This is an absolute required specification for single cell tests of the fuel cells. Also, because of the low power consumption and scaling down of semiconductor processes, semi-conductor devices are experiencing further voltage reductions. The Load can meet with these applications of power evaluation test.

## - Higher-precision

Higher precision is offered for current settings. Resolutions in micro currents are ensured by 3 -range configuration. (Resolving power $10 \mu \mathrm{~A}$ set with L range of PLZ164W and 164WA is possible) Further, each display for the voltmeter, ammeter, and wattmeter now uses a 5-digit display

- Sequence function

Sequence patterns set as you requested can be saved in the built-in memory. In the sequence program, 10 normal sequences and 1 first sequence can be saved. 256 steps of normal sequences, and 1024 steps of the first sequence can be saved in each program.
Simple editing is possible using the large liquid crystal display (LCD)

Convenient function for discharging test of cells

The PLZ4W can measure the time from loadon to load-off. When combined with under voltage protection (UVP) function, the time from when the battery discharge is started until the battery voltage falls to the cutoff voltage can be measured. Also, you can set the timer so it will load-off automatically after a specified time elapses from load-on mode. Once this timer is set, the input voltage value immediately before load-off is displayed, so it is possible to measure the closed circuit voltage after a specified time elapses from the start of discharging battery.

GPIB, RS-232C, USB as standard equipment

The system comes with interfaces GPIB, RS 232C and USB as standard equipment. Also, GPIB complies with SCPI (standard commands for programmable instruments) as well as 488.2

■ PLZ-4W SERIES LINE-UP

| Model | Max Operating Gurrent | Operating voltage (DC) | Power | Type |
| :---: | :---: | :---: | :---: | :---: |
| PLZ164W | 33 A | 1.5 to 150 V | 165 W | I |
| PLZ334W | 66 A | 1.5 to 150 V | 330 W | I |
| PLZ1004W | 200 A | 1.5 to 150 V | 1000 W | II |
| PLZ164WA | 33 A | 0 to 150 V | 165 W | I |
| PLZ664WA | 132 A | 0 to 150 V | 660 W | II |
| PLZ2004WB $^{*}$ | 400 A | 1.5 to 150 V | 2000W |  |

*For the PLZ1004W only. It cannot be connected and used with any other model

## External Dimesions (MAX)

Type I : 214W x 124H (155) x 400D (470)mm Type II: 429.5W (455) x 128H (150) $\times 400 \mathrm{D}$ (470)mm

Type II

## Other functions

The PLZ-4W Series has equipped with all the same functions of its former type of the PLZ3W Series, such as the Soft-start Function, Lock Function, Short Function, ABC Memory Function, Set-up Memory Function, Switching Functions, etc.

## Sample program

We have prepared a sample program for the PLZ-4W Series at our website (www.kikusui.co.jp) (Free-down load service). In these sample programs, you can download the Utility software [MEMcopy] to read, or save the setup memory content from media such as floppy disc, the Sequence Editing software [StepEdit], and the Visual Basic applications such as measured data collection and GUI remote control, and their source code [VB Sample].
Even if you don't have the expensive GPIB card or the programming skills, you can start measuring easily by installing these software and USB drivers in a Windows PC (compatible with Windows 98 or later) with USB mounted, and link the main body of the PLZ-4W series via a USB cable.

- Application Software

PC01-PLZ-4W:The cable for Boosters and Master/Slave units.
PC02-PLZ-4W:The cable for between Master unit and Booster unit.
