

PLZ-5W/5WZ SERIES

DC ELECTRONIC LOAD

Multifunctional Electronic Load PLZ-5W/5WZ Series

Operation Voltage : 1 V to 150 V (from 0.05 V) High Speed Slew Rate : 60 A/µs Arbitrary I-V Characteristics: "ARB Mode" included Parallel Operation Feature: Total current and power can be increased to a maximum of 10.8 kW (2160 A) with booster units. High resolution color LCD display Various Communication Interfaces : LAN (LXI compliant), USB, RS232C, GPIB (Option), External Analog Control Improved Sequence Feature (Maximum 10000 steps) NEW Impedance Measurement Function

The New Flagship model is born!

Introducing the new standard of Electronic Load !

High-Speed Response, Universal Interface, Large-Scale System Compatibility

The PLZ-5W Series electronic load is the successor of the highly respected PLZ-4W that continues the series tradition of high specification and excellent build quality. New

improvements include a user-friendly LCD color display and a wide voltage range from 1V to 150V. Custom voltage/ current profiles can now be programmed using the new ARB function, ideal for LED driver and solar panel testing. The PLZ-5W now includes 6 basic modes of operation (CC, CR, CV, CP, CC+CV, & CR+CV) for optimal flexibility in any test Detachable input terminals facility.

for ease of use

The PLZ-5W is now equipped with a high-speed response feature boasting a maximum slew rate of 60A/us (PLZ1205W) and a minimum setting resolution of 10uA (PLZ205W). Additional features include a soft-start function, variable slew rate, selectable response mode (CV/CR mode), switching function, ABC programmable memory, 20 user-defined setup configurations, and a sequence function. The high-speed response of the PLZ-5W is ideal for the development and testing of modern day power supplies that require sudden changes in current at high speeds as well as for testing of current clamps and transducers. The PLZ-5W series is available in 4 standard models which can be incrementally expanded by adding booster units (PLZ2405W) for a maximum of 10.8kW/2160A. The PLZ-5W now is equipped with a diverse digital communication interface supporting LAN (LXI), USB, RS232C, analog control, and GPIB as a factory option.

Research and development of Photo-Voltaic, (Hybrid) Electric vehicle Applications drives, Fuel Cell technologies, Batteries, LEDs and Power Supplies.

Color liquid crystal display (LCD)

Highly resolution color display allows for the convenient monitoring of values such as voltage, current, power, current capacity (Ah) and power capacity (Wh) all in the same place.

Wide-Ranging Digital Interface

LAN (LXI) / USB / RS232C as standard interface *GPIB Option

New numeric keypad for easy operation.

Values can now be input directly from the front panel.

Maximum Slew Rate of 60 A/µs

The PLZ-5W series boasts a 4 uS rise time, easily satisfying the critical needs of power supply evaluation tests demanding a fast transient response.

High speed voltage tracking characteristics

High speed voltage tracking in CR mode is perfect for applications such as power supply startup tests.

Application software

Sequence Creation Software SD023-PLZ-5W

SD023-PLZ-5W (Wavy for PLZ-5W) is the proprietary Kikusui software for sequence creation and control of Kikusui power sup-

plies and electronic loads. "Wavy" software allows for easy sequence creation and editing without prior programming knowledge. Wavy software can be used for remote control of the electronic load, monitoring of voltage and current values, and for data logging.

[See P15]

*For details, please see our company's homepage.

Operation modes

The following five operation modes are available on the PLZ-5W. These can be selected when the load is in the off state.

Constant current (CC) mode	A current value is specified and the current is kept constant even when the voltage changes.
Constant resistance	A conductance value is specified and the PLZ-5W sinks current
(CR) mode	proportional to the voltage variation.
Constant voltage	A voltage is specified and the PLZ-5W sinks current so that the
(CV) mode	voltage at the load input end of the PLZ-5W is constant.
Constant power	A voltage is specified and the PLZ-5W sinks current so that the
(CP) mode	power consumed inside the electronic load is constant.
Arbitrary I-V characteristics (ARB) mode	The desired load characteristics can be set by specifying multiple arbitrary voltage values and current values as I-V characteristics.

Adjustable slew rate

The speed of change can be set when the current is changed. The slew rate setting will function in the following instances.

•When the setting is changed to vary the current value

(including the switching function).

•When the current value is changed using external control in constant current (CC) mode.

•When the current value is changed while the load is on.

CC Mode / High range / 0-80A Switching

The slew rate is set according to the current range as an amount of current change per unit of time. Moreover, a common value is set for the rise and fall speeds. In CC mode and ARB mode, the slew rate can be set regardless of whether the load is on or off.

Ch4 load current 20A/div Horizontal 10us/div

▲Shift in the current waveform with the change in the slew rate

High precision and high resolution

The built-in three-range configuration provides wide dynamic range and high precision.

PLZ205W operating range and setting resolution							
		Operating range	Setting resolution				
Constant current mode	H range M range L range	0 A to 40 A 0 A to 4 A 0 A to 0.4 A	1 mA 0.1 mA 0.01 mA				
Constant resistance mode*	H range	40 S to 0.002 S	1 mS				
	M range	4 S to 0.0002 S	0.1 mS				
	L range	400 mS to 0.02 mS	0.01 mS				
Constant voltage mode	H range	1 V to 150 V	5 mV				
	L range	1 V to 15 V	0.5 mV				
Constant power mode	H range	20 W to 200 W	0.005 W				
	M range	2 W to 20 W	0.0005 W				
	L range	0.2 W to 2 W	0.00005 W				

* Conductance [S] = Input current [A] / Input voltage [V] = 1 / Resistance [Ω]

Load on/off operation

The following load on/off settings are available in addition to standard operations that can be carefully adjusted to fit the needs of any test environment.

- Start with "load on" when power is turned on
- Display elapsed "load on" time
- Auto "load off" when time limit is reached
- Control "load on/off" with external controls such as relays

SW. Arbitrary I-V characteristics (ARB) mode In ARB mode arbitrary I-V characteristics can be set by entering

multiple I-V points (voltage and current value set points). 3 to 100 points can be registered and the spaces between all points are automatically linearly interpolated. This mode can be used for the simulation of LED drivers and other DUT's with non-linear characteristics.[P8]

Short function

When the short function is activated, the maximum current value will be set if in CC mode, and the minimum voltage value will be set if in CR mode. The relay contact (30 Vdc/1 A) of the EXT CONT connector closes, and the load imput terminals can then be shorted by driving an external high-current relay.

Switching function

Switching mode can be performed at up to kHz while in CC and CR modes. The switching setting parameters such as switching level, frequency, and duty factor can be changed at any time, even while the load is on.

[Setting parameters]	[Setting parameters]						
Operation mode: CC ar	nd CR						
Frequency setting rang	e: 1 Hz to 100 kHz						
Frequency setting reso	lution						
1 Hz to 10 Hz	0.1 Hz						
11 Hz to 100 Hz	1 Hz						
110 Hz to 1 kHz	10 Hz						
1.1 kHz to 10 kHz	0.1 kHz						
10 kHz to 100 kHz	20 kHz, 50 kHz, 100 kHz						

Frequency setting accuracy: ±(0.5 % of set)

Duty factor, steps

,	
1 Hz to 10 Hz	
11 Hz to 100 Hz	5.0% to 95.0%, in steps of 0.1%
110 Hz to 1000 Hz	
1.1 kHz to 10.0 kHz	5.0% to 95.0%, in steps of 1%
10 kHz to 100 kHz	10% to 90%, in steps of 10%

* The minimum time interval for setting the duty factor is 5 µs.

Soft start function

The soft start feature controls the rise time of the load current. The soft start feature can be activated when the following conditions are met.

- •The rise time of the soft start has been set.
- Load on" while in CC Mode.
- Soft start input settings start from zero input and end equal to or above the minimum operating voltage (0.05 V).

This function can be used if the output of the DUT becomes unstable when the load current rises sharply, or when the operator wishes to delay the current change on startup to prevent the DUT's overcurrent protection circuit from being activated.

Can be set to OFF / 100 μs / 200 μs / 500 μs / 1 ms / 2 ms / 5 ms / 10 ms / 20 ms. This sets the soft start time.

Sequence function

The operator can execute a long sequence of predetermined values with the sequence function. A sequence consists of programs and steps. A program is a collection of steps, which are executed in order, one by one, starting from step 1. The program is considered complete after the last step in the program is executed.

et a program for each operation mod Up to 30 programs can be set.

	· · · · · · · · · · · · · · · · · · ·
Setting item	Description
Load setting	Current, conductance, voltage, power. The values that can be set depend on the current operation mode.
Step execution time	0.000025s to 3600000s
Transition method of the current value	Step or Ramp
Number of loops of program	1 to 100000 repetitions, or infinite repetitions.
Sequence editing / execution / stop method	Front panel operation or remote operation via RS232C / LAN / USB.
Miscellaneous	Load on/off control, Slew Rate, CV mode addition, Trigger signal setting, trigger signal output, Specifies the value at which a protection function (OCP, OPP, UVP) is activated.

TALink

The operator can use the TALink (Transient Acquire Link) trigger to synchronize the PLZ-5W with steps of a sequence and enable data logging. Logged data can then be acessed via digital communication with the PLZ-5W.

Remote sensing function

With remote sensing, the voltage measurement point can be changed from the load input terminal to the DUT sensing point. By connecting the sensing leads to the DUT, the effects of voltage drops caused by resistance in the load cables can be reduced and the load current stabilized. To activate remote sensing, connect the sensing cables to the sensing terminals of the PLZ-5W at the DUT end, and enable the remote sensing function.

• Possible remote sensing compensation voltage : approx. 7 V (Total potential difference between the input terminals and sensing terminals)

Auto load off timer

The auto load off timer automatically turns off the load after a specific amount of time elapses from the discharge of the DUT. The integrated power and current is measured immediately after the load is turned off, ideal for battery discharge tests.

Synchronized operation

The following synchronization features are available when simply connecting the PLZ-5W with other equipment using a communication cable.

- Synchronizing load on/off among multiple pieces of equipment
- Synchronizing measurements (remote control)
- Synchronizing the start time and resume time for sequences across multiple units

Different PLZ-5W models can be connected (Ex: PLZ205W and PLZ1205W). Synchronization is also available during parallel operation.

Setup memory

The setup memory can store up to 20 sets of the settings listed below.

- Operation mode
- Load settings (current, conductance, voltage, power)
- Current range setting
- Voltage range setting
- Slew rate
- Switching level (current value/conductance value, or percentage)
- Switching interval (frequency/time of one cycle and duty cycle/ operating time on the high side.)
- Alarm detection point
- Content of ABC preset memories

ABC preset memory

Three setting values can be stored in preset memory slots A, B, and C. The stored values can be recalled freely at any time even when the load is on. In CC+CV and CR+CV modes, constant current and constant voltage values, as well as constant resistance and constant voltage values can be recalled and saved, respectively.

Diverse protections, other functions

Overcurrent protection (OCP), Overpower protection (OPP), Overvoltage detection(OVP), Undervoltage protection (UVP), Overheat detection(OTP), Reverse-connection detection(REV), Alarm input detection, Configuration setting, USB Keyboard Compliant

Booster (PLZ2405WB)

*PLZ2405WB is a dedicated booster for PLZ1205W. It cannot be used with any other model.

Booster unit PLZ2405WB

[Configuration example]

Achieving 2400 W in a "2U" chassis

Connecting up to 4 booster (PLZ2405WB) units with the master (PLZ1205W) increases the maximum system capability to 10.8 kW 2160 A. The optional parallel cable (PC01-PLZ-5W) is required to connect between the master and slave/booster units.

Parallel operation

Multiple units of the same type can be connected in parallel.

Even without boosters, up to five PLZ-5W units of the same model can be connected in parallel for a maximum of 6 kW, 1200 A. While connected in parallel, one master has complete control of the slave unit(s), allowing the user to control the entire system and monitor all data from the master unit's panel. Parallel operation requires one optional parallel cable (PC01-PLZ-5W) per unit.

*The PLZ2405WB (Booster) comes with 1 pc. of parallel operation cable (PC01-PLZ-5W).

• Number of parallel connected units and capacities (maximum currents and maximum voltages)

Slave unit	1 unit	2 units	3 units	4 units
PLZ205W	80 A	120 A	160 A	200 A
	400 W	600 W	800 W	1000 W
PLZ405W	160 A	240 A	320 A	400 A
	800 W	1200 W	1600 W	2000 W
PLZ1205W	480 A	720 A	960 A	1200 A
	2400 W	3600 W	4800 W	6000 W

*Additional parallel operation calibration can achieve the same setting and measurement accuracy of a single unit.

Impedance measurement function (factory option)

The perfect addition for battery production and maintenance

- The all-new PLZ-5WZ series allows for easily configured impedance measurements with dedicated impedance measurement software.
- Impedance measurements are made during discharge, allowing for real-time measurement of impedance values from the DUT.
- Capable of R, jX, θ, and Z measurements.
- Measures AC frequency from 100 Hz 10 kHz (seven fixed settings) and signal levels can be set arbitrarily.
- Equipped with a voltage slope correction function that minimizes the effect of voltage slope during during battery discharge tests.
- Zero adjustment function allows for increased accuracy during critical impedance measurements.
- Measurement results and graphical information can be copied directly from the application software to programs like Excel.

Measurement functions

Item	Details	Conditions & remarks
Measurement AC frequency	100Hz、200Hz、500Hz、1kHZ、2kHz、5kHz、10kHz	Seven fixed settings
Measurement AC current (Meas Curr.)	0.1 % to 10 % of the DC load current (Load Curr.)	Set as a percentage
Measurement time	50 ms to 5 s	Depends on the measurement AC frequency.
Measurement items	R、X、 Z 、θ	θ is calculated from R and X.
Measurement average	Averages 1 to 16 measured values.	Function available when using application
Zero adjustment (0 ADJ)	Zero adjustment on the DUT voltage sensing end	Function available when using application
V Slope Cancel	Eliminates the effect that the slope of the DUT voltage caused by discharge has on measurements	Complete elimination is not possible if the slope is nonlinear
Measurement method	2-phase lock-in amplifier method	Based on digital computation.
Operating environment	Windows7/Windows10 (32bit/64bit)	

Impedance measurement for each single cell is also possible

* Accuracy of measurements outside the measurement range, L range current, and shaded portion is not guaranteed.

* θ is calculated from R and X by the application software. * Specifications not listed above are in accordance with PLZ-5W Series product specifications

Current Sensor Evaluation (Example)

Accurate current sensor evaluation possible when combined with a high-precision CC DC power supply. Additionally, 3-level range settings allow you to.

Power Supply Impedance Measurement (Example)

• Arbitrary I-V characteristics (ARB) mode

In ARB mode arbitrary I-V characteristics can be set by entering multiple I-V points (voltage and current value set points). 3 to 100 points can be registered and the spaces between all points are automatically linearly interpolated. This mode can be used for the simulation of LED drivers and other DUT's with non-linear characteristics.

Impedance measurement of the power supply (Example)

[When using the PLZ-5W]

Measure power supply impedance by configuring a system using the PLZ-5W, a function generator, and a digital multimeter.

Fuse Rupture Test (Example)

For fuse rupture tests, DC power supplies with high-speed CC current control is absolutely vital. Although it is normaly quite difficult to achieve such high-speed control with only a DC power supply, the addition of a PLZ-5W electronic load makes high speed current control possible. With the PLZ-5W, fuse rupture tests that adhere to standards such as the JASO D612 are made possible. These tests include voltage drop tests, transient current cut-off tests, rupture time tests, step energization tests, and breaking capacity tests.

Battery Evaluation Test (Example)

Although high-speed operation cannot be achieved using only the PAT-T high-capacity switching power supply, the fast-response unipolar power supply system can be suplemented by connecting with the PLZ-5W series electronic load in series and parallel. This makes it possible to flow current while synchronizing the charge and discharge current patterns for a battery at high speeds. Furthermore, the additional features of the PLZ-5WZ allow for seamless measurement of battery imedance during evaluation.

PLZ-5W SR (Smart Rack) Series

The compact, large scale PLZ-5W SR (Smart Rack) system is available for high power applications that don't take up valuable test space.

- The system comes in 4 models ranging from 6 kW to 20.4 kW.
- Assembled with exclusive components for optimal design.
- Systems are delivered fully assembled and tested, ready to operate immediately.
- AC input 90 V to 250 V auto select; no special wiring is required.
- Range switching function guarantees the exact specification down to the smallest input. (Performance test data is included)
- LAN/USB/RS232C as standard interface. *GPIB option
- Compatible with "Wavy" Sequence Creation Software.
- Load input terminal is designed for optimal safety.
- Load cable for high current is available.

Safety covers supplied on all models.

User-friendly terminal cover design for maximum safety and ease of access Applications (example)

• Charge/Discharge test on the large capacity secondary battery
 Converter evaluation
 Alternator evaluation

● FC stack cell evaluation ● PV panel evaluation

• EV charger evaluation • Heat generation evaluation by the harness electric conduction

• Capacitor endurance test • Evaluation on the industrial larage capacity DC power suppy system

The Smart Rack is safe, easy-to-use, and expertly designed.

PLZ205W/PLZ405W/PLZ1205W Specifications

Ratings			
Item	PLZ205W	PLZ405W	PLZ1205W
Operating voltage	1 V to 150 V *1		
Current	40 A	80 A	240 A *2
Power	200 W	400 W	1200 W
The minimum operating voltage	approximately 0.05 V. (At the load input terminals on the rear panel.)		
Input resistance when the load is off	Approx. 660 kΩ *3		
Load input terminal's isolation voltage	±500 V		
and the constitution of a state of a	· · · · · · · · · · · · · · · · · · ·	A A Const the succession of	and the second terms of the sheet terms

Isolation voltage including mode, for every slew rate setting of 1 A / µs, the minimum operating voltage (including the voltage drop due to the wiring inductance component) increases by approximately 150 mV for the PLZ205W, 125 mV for the PLZ405W, and 75 mV for the PLZ105W. *2 80 A for the load input terminals on the front panel. The specifications of the PLZ-5W are for the load input terminals on the front panel may not meet the specifications. *3 In the case of parallel operation using the same models, approx. 660 / number of units kΩ.

	Item	PLZ2405WB
Input power supply voltage range		100 Vac to 240 Vac (90 Vac to 250 Vac) single-phase, continuous
Input	frequency range	47 Hz to 63 Hz
Powe	er consumption	95 VAmax
Inrush c	urrent (peak value)	45 Apeak
Operating	temperature range	0 °C to 40 °C (32 °F to 104 °F)
Operati	ng humidity range	20%rh to 85%rh (no condensation)
Storage	temperature range	-20 °C to 70 °C (-4 °F to 158 °F)
Storag	e humidity range	90%rh or less (no condensation)
Installation location		Indoor use, altitude of up to 2000 m, overvoltage category II
Iso	lation voltage	±500 V
	Between primary and input terminals	500 Vdc
Insulation resistance	Between primary and chassis	30 MΩ or greater
redictarioe	Between input terminals and chassis	(at 70%rh humidity or less)
	Between primary and input terminals	No abnormalities at 1500 Vac for 1 minute
Withstanding voltage	Between primary and chassis	No abnormalities at 1500 Vac for 1 minute
ronago	Between input terminals and chassis	No abnormalities at 750 Vdc for 1 minute
Exter	nal dimensions	430(16.93)W×86(3.39)H×450(17.72)Dmm(inches)
	Weight	Approx. 15 kg (33.07 lb)
Accessories		Power cord, Load input terminal cover, Parallel operation signal cable kit (PC01-PLZ-5W), Load input terminal screw set (2 sets), Screws for the load input terminal cover (2 pcs.), Operation manual

General specifications

Over temperature protection (OTP) Turns off the load when the heatsink temperature reaches 100 °C *1 Vin: Load input terminal voltage or sensing terminal voltage.

Outline drawing

Sequence creation and control software

SD023-PLZ-5W (Wavy for PLZ-5W)

Make the Kikusui power supplies and electronic load more intelligent!

Expand the ideas of engineers with the sequence creation and control software " Wavy "

[Operating environment] Windows $7 \swarrow 10$

The SD023-PLZ-5W (Wavy for PLZ-5W) is an application software designed for sequence creation and operation of Kikusui's PLZ-5W series of DC electronic loads. It allows users to freely carry out sequence control of power supplies and electronic loads without any programming knowledge. Users can easily edit sequences as if drawing a picture or working on a spreadsheet.

GPIB converter (PIA5100)

This converter converts RS232C or USB of the PLZ-5W to GPIB, enabling connection of a remote controller using GPIB. [Accessories: Power cord set, Magnetic sheet]

Rack adapters, brackets

These are rack mounting options.

Unit: mm (inches)

Parallel operation signal cable kit (PC01-PLZ-5W)

One cable required for each slave/booster unit. Cable length : 30cm

*The PLZ2405WB (Booster) comes with 1 pc. of parallel operation cable (PC01-PLZ-5W).

Name	Model	Appropriate Model	Description
Rack adapters	KRA3	PLZ205W	For EIA inch racks
