

LB478A & LB479A CW and Pulse (Modulation) USB PowerSensor+™

Data Sheet

Key PowerSensor+™ Specifications

10 MHz to 8 GHz (functional to 10 GHz)

-60 dBm to +20 dBm

1.95% Total Error*

1.09:1 VSWR (-27 dB Return Loss)

* Measuring a well matched DUT (-20 dBm @ 1 GHz)

Key PowerSensor+™ Capability

Pulse (Modulation) Power Measurements: *Duty Cycle, Measured Pulse Power, Peak Power, Crest Factor*

CW and Average Measurements: *Average Power, Duty Cycle-Corrected Pulse Power, Data Logging*

Description

The PowerSensor+™ is an easy to use high performance, general purpose and pulse (modulation) power meter and sensor in one. High speed measurements and temperature compensated accuracy provide superior in-class performance. These instruments are suitable for making real time scalar analyzer measurements with 2000 readings per second.

Get up and running quickly with the CW and Pulse power meter panels. Easily Integrate the power sensors into Lab View, C, VB and other programming environments using the supplied drivers and programming examples.

Integration and usability are further simplified because calibration and zeroing are not required before use and, you have the flexibility of selecting from a variety of connector types including SMA, N, and 3.5 mm (male or female).

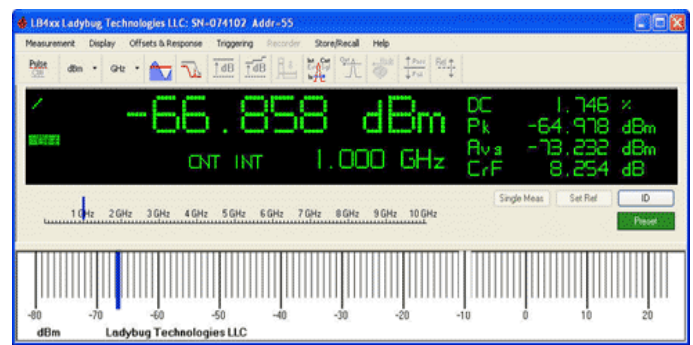

Unlike other CW sensors, the LB478A and LB479A can make a variety of Peak and Pulse Power measurements often found in power measurement solutions costing well over \$10,000.

Features

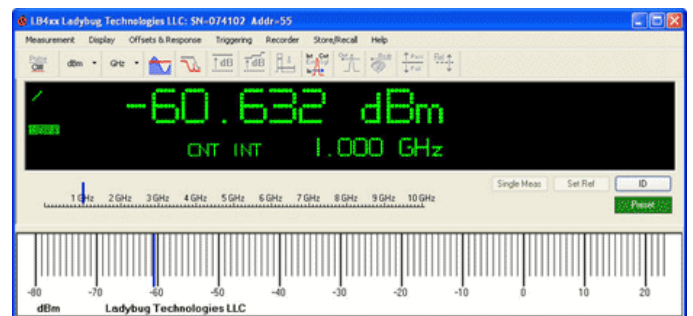

- Superior in-class price
- Superior in-class performance
- Fast - 10 to 100 times faster than competitive sensors
- Compact - 1/10 the volume of competitive sensors
- Ruggedized USB connector - does not fatigue or break like competitive sensors
- Trigger on RF input levels
- Fully calibrated over temperature
- Offered with 30 day return policy

Applications

- General purpose scalar measurements
- General average and pulse RF and microwave power measurements requiring leading edge accuracy:
 - CW & pulsed signals
 - Narrow and wide band signals: CDMA, W-CDMA, QAM, OFDM, GSM, TDMA, QPSK, FSK, AM, FM, etc.
 - Recorders, power monitoring, and ALC loops
- Research & development, and manufacturing
- Maintenance, repair, installation, and service
- Radar, wireless, satellite, radio links, etc.

¹ Error term definitions: Mm (Mismatch); CF (Cal Factor); N (Noise); L (Linearity); T (Temperature); Z (Zero Offset). All error terms are converted to percentages for RSS calculation.

² Use the following formula to determine Zero Offset error (%): $Z = (\text{Zero Offset Power} / \text{Measured Power})100$.

³ Linearity & Zero Offset are measured as a combined specification, LadyBug sensors do not require zeroing or reference calibration before use.

⁴ The sensor must be powered (USB connected to a PC) for accurate match testing.

Data Sheet

Revisions to data sheet by date:

03/25/09:

1. Add mechanical outline drawings.
2. Add revision page.
3. Change descriptor "Pulse (Peak) Power" to "Pulse (Modulation) Power".
4. Accuracy updates: temperature; add Zero Offset.

06/01/12

1. Add 3.5 mm connectors
2. Add temp sensitivity graph

11/09/16

1. Add SWR footnote under product comparison

04/25/21

1. Change photos and address

10/21/21

1. Add match note 4
