# Definitions

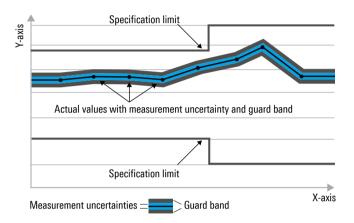

#### General

Product data applies under the following conditions:

- · Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

#### Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as  $\langle, \leq, \rangle, \geq, \pm$ , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

#### Non-traceable specifications with limits (n. trc.)

Represent product performance that is specified and tested as described under "Specifications with limits" above. However, product performance in this case cannot be warranted due to the lack of measuring equipment traceable to national metrology standards. In this case, measurements are referenced to standards used in the Rohde & Schwarz laboratories.

#### Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

#### Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

#### Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

#### Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

#### Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are designated with the format "parameter: value".

Non-traceable specifications with limits, typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP/3GPP2 standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bits per second (Gbps), million bits per second (Mbps), thousand bits per second (kbps), million symbols per second (Msps) or thousand symbols per second (ksps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Mbps, Msps, ksps and Msample/s are not SI units.

4 Rohde & Schwarz R&S<sup>®</sup>ZNB Vector Network Analyzer

<sup>&</sup>lt;sup>1</sup> Specified and typical data given in this data sheet applies to the R&S<sup>®</sup>ZNB4, the R&S<sup>®</sup>ZNB8 and the R&S<sup>®</sup>ZNB20; note their respective frequency ranges.

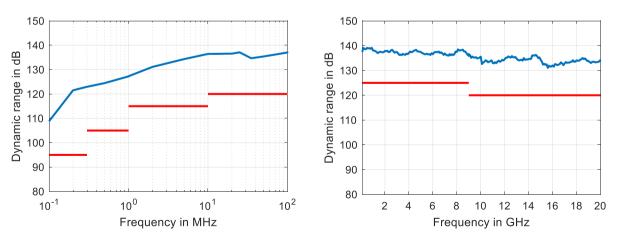

# Dynamic range

The receiver noise floor referred to in the following is defined as the RMS value of the data trace of the transmission magnitude, which is produced by noise and crosstalk with the test ports short-circuited. The specification applies at 10 Hz measurement bandwidth, without user correction applied. The dynamic range can be increased by using a measurement bandwidth of 1 Hz. Crosstalk does not limit the dynamic range. Dynamic range performance is specified between port 1 and port 2 as well as between port 3 and port 4 (4-port model). Otherwise, dynamic range performance is typical.

|                                   |   | Specification                    | Typical                        |
|-----------------------------------|---|----------------------------------|--------------------------------|
| System dynamic range <sup>2</sup> | R&S <sup>®</sup> ZNB4 and the R&S <sup>®</sup> ZNB8 | (without options, for extended d | ynamic range refer to Options) |
|                                   | 9 kHz to 100 kHz                                    | ≥ 110 dB                         | 122 dB                         |
|                                   | 100 kHz to 50 MHz                                   | ≥ 125 dB                         | 138 dB                         |
|                                   | 50 MHz to 7GHz                                      | ≥ 130 dB                         | 140 dB                         |
|                                   | 7 GHz to 8.5 GHz                                    | ≥ 120 dB                         | 130 dB                         |

<sup>&</sup>lt;sup>4</sup> Sweep time is to be understood as cycle time; static frequency accuracy of the instrument applies; measured with firmware version 3.15, Windows 10.

# Measurement accuracy of the R&S<sup>®</sup>ZNB4 and the R&S<sup>®</sup>ZNB8

This data is valid between +18 °C and +28 °C, provided the temperature has not varied by more than 1 °C since calibration. Validity of the data is conditional on the use of an R&S<sup>®</sup>ZV-Z270 calibration kit. This calibration kit is used to achieve the effective system data specified below. Frequency points, measurement bandwidth and sweep time have to be identical for measurement and calibration (no interpolation allowed).

| Uncertainty of transmiss | ion measurements | Magnitude | Phase |  |
|--------------------------|------------------|-----------|-------|--|
| 9 kHz to 100 kHz         | +0 dB to -20 dB  | 0.05 dB   | 0.5°  |  |
|                          | -20 dB to -40 dB | 0.07 dB   | 0.6°  |  |
|                          | -40 dB to -50 dB | 0.12 dB   | 1.0°  |  |
|                          | -50 dB to -60 dB | 0.32 dB   | 2.3°  |  |
| > 100 kHz to 8.5 GHz     | +0 dB to -20 dB  | 0.04 dB   | 0.5°  |  |
|                          | -20 dB to -40 dB | 0.06 dB   | 0.6°  |  |
|                          | -40 dB to -50 dB | 0.09 dB   | 0.9°  |  |
|                          | -50 dB to -60 dB | 0.19 dB   | 1.5°  |  |

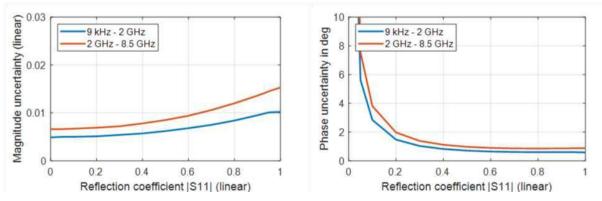

Specifications are based on a matched DUT, a measurement bandwidth of 10 Hz and a nominal source power of -10 dBm.

Typical uncertainty of transmission magnitude and transmission phase measurements for the R&S<sup>®</sup>ZNB4 in the frequency range from 9 kHz to 4.5 GHz, for the R&S<sup>®</sup>ZNB8 in the frequency range from 9 kHz to 8.5 GHz; analysis conditions:  $S_{11} = S_{22} = 0$ , cal. power: -10 dBm, meas. power: -10 dBm

| Uncertainty of reflection measurements | Logarithmic      | :         | Linear | Linear           |           |  |
|--|------------------|-----------|--------|------------------|-----------|--|

<sup>&</sup>lt;sup>5</sup> The stability is obtained by measuring the through connection repeatedly while varying the temperature in the range 18 °C to 28 °C and observing the deviations between the measurements. A temperature drift per Kelvin is deduced.

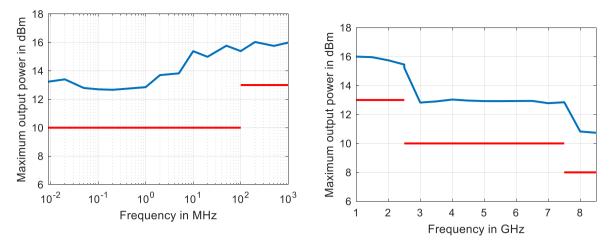

<sup>&</sup>lt;sup>6</sup> The phase drift increases linearly with frequency. It is described only by the slope, therefore the factor between phase drift and frequency is stated.

### R&S<sup>®</sup>ZNB-B1

| Bias tee for the R&S <sup>®</sup> ZNB4 and the | R&S®ZNB8   |   |
|--|--|---|
| Connector type                                 |  | BNC, female   |
| Maximum nominal input voltage                  |  | 30 V  |
| Maximum nominal input current                  |  | 400 mA  |
| Damage voltage                                 |  | 30 V  |
| Damage current                                 |  | 420 mA  |
| Frequency range                                | R&S <sup>®</sup> ZNB4 with R&S <sup>®</sup> ZNB-B1 | 100 kHz to 4.5 GHz  |
|  | R&S <sup>®</sup> ZNB8 with R&S <sup>®</sup> ZNB-B1 | 100 kHz to 8.5 GHz  |
| Frequency response data                        |  | typical and specified data is valid for the limited frequency range given above |

### Factory-calibrated system data

This data is valid between +18 °C and +28 °C. The data is based on a source power of -10 dBm and a measurement bandwidth of 1 kHz.

| Parameter             | Frequency range    | Specification | Typical |
|-----------------------|--------------------|---------------|---------|
| Directivity           | 100 kHz to 4.5 GHz | ≥ 30 dB       | 50 dB   |
|                       | 4.5 GHz to 8.5 GHz | ≥ 30 dB       | 50 dB   |
| Source match          | 100 kHz to 500 kHz | ≥ 20 dB       | 30 dB   |
|                       | 500 kHz to 8.5 GHz | ≥ 30 dB       | 50 dB   |
| Reflection tracking   | 100 kHz to 8.5 GHz | ≤ 0.5 dB      | 0.1 dB  |
| Load match            | 100 kHz to 500 kHz | ≥ 10 dB       | 15 dB   |
|                       | 500 kHz to 8.5 GHz | ≥ 18 dB       | 25 dB   |
| Transmission tracking | 100 kHz to 8.5 GHz | ≤ 0.5 dB      | 0.1 dB  |

### R&S<sup>®</sup>ZNB-B4

| Static frequency accuracy               |   | (time since last adjustment × aging rate) +<br>temperature drift + calibration accuracy |
|---|---|---|
| Aging per year                          | with R&S <sup>®</sup> ZNB-B4 precision frequency reference option | ±1 × 10 <sup>-7</sup>   |
| Temperature drift (5 °C to +40 °C)      | with R&S <sup>®</sup> ZNB-B4 precision frequency reference option | ±1 × 10 <sup>-8</sup>   |
| Achievable initial calibration accuracy | with R&S <sup>®</sup> ZNB-B4 precision frequency reference option | ±5 × 10 <sup>-8</sup>   |

|  | 100 kHz to 1 GHz  | 10 kHz       | ≤ 0.005 dB    | 0.001 dB |
|  | 1 GHz to 5 GHz    | 10 kHz       | ≤ 0.005 dB    | 0.002 dB |
|  | 5 GHz to 8.5 GHz  | 10 kHz       | ≤ 0.005 dB    | 0.003 dB |

<sup>&</sup>lt;sup>8</sup> The dynamic range is defined as the difference between the actual maximum source power and the RMS value of the data trace of the transmission magnitude, which is produced by noise and crosstalk with the test ports short-circuited. The specification applies at 10 Hz measurement bandwidth, without system error correction. The dynamic range can be increased by using a measurement bandwidth of 1 Hz. Crosstalk does not limit the dynamic range. Dynamic range between port 1 and port 2 and between port 3 and port 4 (4-port model). Otherwise the dynamic range performance is typical.
<sup>8</sup> The action of the product of the product dependence of the product d

<sup>&</sup>lt;sup>9</sup> The noise level is defined as the RMS value of the specified noise floor.

#### Extended warranty with a term of one and two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge <sup>17</sup>. Necessary calibration and adjustments carried out during repairs are also covered.

#### Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs <sup>17</sup> and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

#### Extended warranty with accredited calibration (AW1 and AW2)

Enhance your extended warranty by adding accredited calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated under accreditation, inspected and maintained during the term of the contract. It includes all repairs <sup>17</sup> and accredited calibration at the recommended intervals as well as any accredited calibration carried out during repairs or option upgrades.

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

<sup>&</sup>lt;sup>16</sup> For options that are installed, the remaining base unit warranty applies if longer than 1 year. Exception: all batteries have a 1 year warranty.

<sup>&</sup>lt;sup>17</sup> Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.

Version 04.00, July 2021

26 Rohde & Schwarz R&S<sup>®</sup>ZNB Vector Network Analyzer

Version 04.00, July 2021

#### Service that adds value

- Local and personalized
   Customized and flexible
   Uncompromising quality
   Long-term dependability

#### **Rohde & Schwarz**

The Rohde&Schwarz technology group is among the trailblazers when it comes to paving the way for a safer and connected world with its leading solutions in test&measurement, technology systems, and networks&cybersecurity. Founded more than 85 years ago, the group is a reliable partner for industry and government customers around the globe. The independent company is headquartered in Munich, Germany and has an extensive sales and service network with locations in more than 70 countries.

www.rohde-schwarz.com

#### Sustainable product design

- Environmental compatibility and eco-footprint
- Energy efficiency and low emissions
- Longevity and optimized total cost of ownership

Certified Quality Management ISO 9001

Certified Environmental Management ISO 14001
