

- 0.01 μHz to 30 MHz, 20 Vp-p, 1 or 2 channels
- Intuitive operation with a 3.5" LCD screen
- Synchronize up to 6 units to provide up to 12 output channels
- A variety of sweeps and modulations

# How can you replicate real world signals? Precisely

FG400 Series
Arbitrary/Function Generator

Bulletin FG400-01EN

## Features and benefits

#### Easily generate basic, application specific and arbitrary waveforms.

The FG400 Arbitrary/Function Generator provides a wide variety of waveforms as standard and generates signals simply and easily.

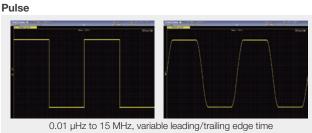

There are one channel (FG410) and two channel (FG420) models. As the output channels are isolated, an FG400 can also be used in the development of floating circuits. (up to 42 V)

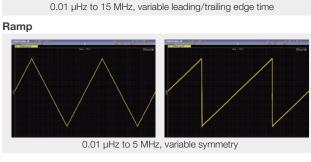

#### Basic waveforms

# Sine DC $0.01~\mu Hz$ to 30~MHz±10 V/open

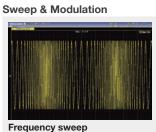

# Square

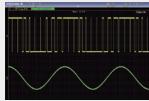

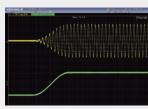

#### Advanced functions

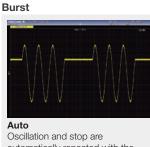

Setting items start/stop frequency, time, mode (continuous, single, gated single), function (one-way/shuttle, linear/

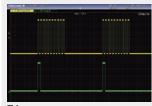

PWM Setting items carrier duty, peak duty deviation Output duty the range of carrier duty ±peak duty deviation

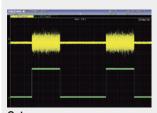

carrier amplitude, modulation depth Output amp. the range of amp./2  $\times$  (1  $\pm$ mod. Depth/100)

automatically repeated with the respectively specified wave number.

Trigger Oscillation with the specified wave number is done each time a trigger is received.

Oscillation is done in integer cycles or half cycles while the gate is on.

#### For trouble shooting

Arbitrary waveforms (16 bits amplitude resolution) of up to 512 K words per waveform can be generated. 128 waveforms with a total size of 4 M words can be saved to the internal non-volatile memory. Waveforms can be selected from the displayed list.

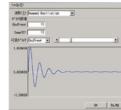

Waveforms can be created in the FG400 or with the editor software.

The list of arbitrary waveforms

Editing screen in the FG400

Editing screen of the editor software

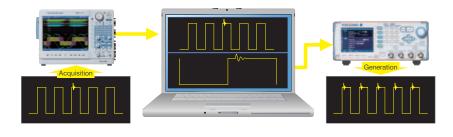

#### Acquire signal noise in the field, and then recreate it in the lab

The FG400 can generate signals as arbitrary waveforms that have been acquired by measuring instruments. Trouble shooting is made easier as the FG400 can generate waveforms that are difficult to reproduce. For example noise that only occurs on site. With the XviewerLITE software (freeware), waveform (binary data) that is acquired using a YOKOGAWA DL850E or DLM4000 can be analyzed on the PC to find the abnormal waveform. This abnormal part can then be clipped, saved and generated using the FG400.

#### [Application]

#### Clipping the abnormal signal, then adding it to the normal signal

Connect the clipped abnormal signal output of channel 2 to the additional input terminal of channel 1, and then press the Manual trigger key. The abnormal signal is added to the normal pulse waveform that is set on channel 1.

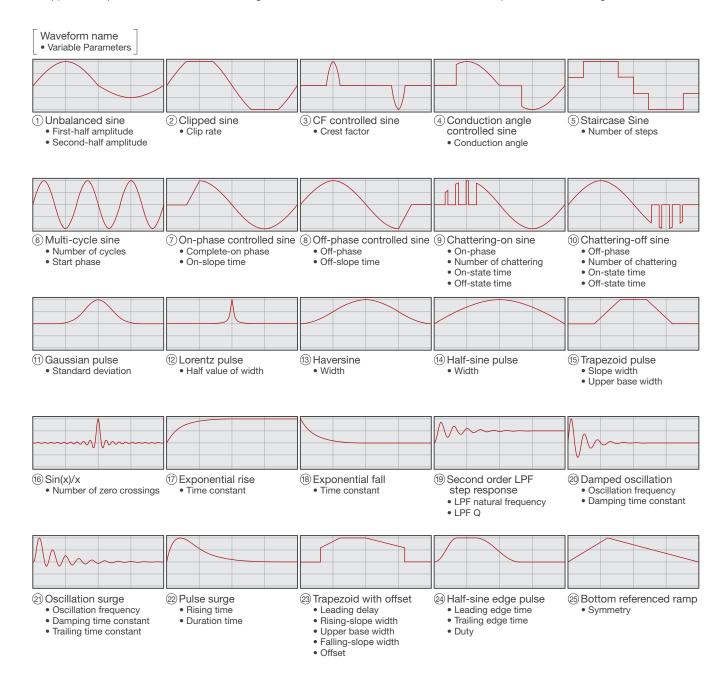

# Features and benefits

#### Application-specific waveforms are also standard

#### **Parameter-Variable Waveforms**

In some cases engineers need application-specific waveforms like those needed to evaluate the response characteristics of mechanical/ electrical circuits and to emulate power supply circuits. The FG400 provides 25 different types of waveform as standard. As the parameters of application-specific waveforms can be changed like those of basic waveforms, waveforms are quicker and easier to generate.

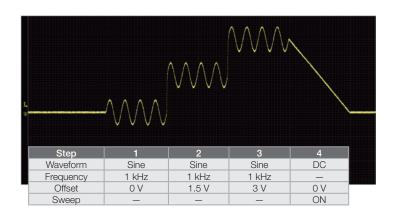

#### 5 Manually program waveform patterns

#### Sequence function

Sequences of different waveform patterns can be generated by programming the parameters. Complex sequences can be easily created using the "Sequence Edit Software".

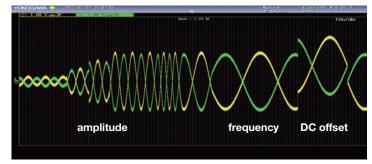

Available parameters include: waveform, frequency, phase, amplitude, DC offset, square wave duty, step time, hold operation, jump destination, number of jumps, step stop phase, branch operation, step termination control, step sync code output

#### When 2 channels are linked (FG420 only)

In the FG420 the two output channels can be linked. In this mode, both output signals vary when either channel is adjusted.

- Independent: Independent setting
- 2- phase: Holds the same frequency
- Constant frequency difference: Holds the frequency difference as a constant value
- Constant frequency ratio: Holds the frequency ratio as a constant value
- Differential output: Same frequency, amplitude, and DC offset. Reverse phase waveform

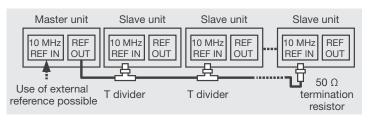

Example of the differential output

#### When you need more than 2 channels

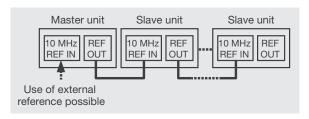

By synchronizing multiple FG410 and FG420s, a generator of up to 12 phases (using six FG420s) can be created. The phase of each channel is synchronized to the master unit and can be individually adjusted.

#### Greater accuracy and stability

The FG400 has an external input terminal to increase frequency accuracy and stability by using a frequency reference with better accuracy than the built-in reference (for example, a rubidium frequency standard).

Connection method 1 (up to 6 units)

Connection method 2 (up to 4 units)

# Input/output terminal

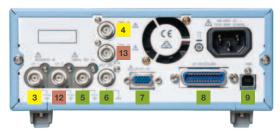

#### FG410 (1 ch)

#### FG420 (2 ch)

#### CH1 I/O terminals

- 1 Waveform output
- 2 Sync/sub-output
- 3 external modulation/addition input
- 4 external trigger input

#### Common I/O terminals

- 5 External 10 MHz frequency reference input
- 6 Frequency reference output
- 7 Multi-I/O connector
- 8 GPIB connector
- 9 USB connector

#### CH2 I/O terminals

- 10 Waveform output
- 11 Sync/sub-output
- external modulation/addition input
- 13 external trigger input

#### Specification of FG400

Output and Oscillation	Modes			
Number of channels	FG410: 1 char	nnel FG420:	2 channels

Channel modes	Independent, 2-phase (holds same frequency), Constant frequency difference, Constant frequency ratio, Differential output (Same frequency, amplitude, and DC offset. Reverse phase waveform.)		
Equivalent setting, same operation	Set two channels at the same time.		
Frequency difference setting range	0.00 µHz to less than 30 MHz (0.01 µHz resolution) CH2 frequency – CH1 frequency		
Frequency ratio N:M setting range	1 to 9,999,999 (for each of N and M)		
Phase synchronization	N:M = CH2 frequency:CH1 frequency Automatically executed during channel mode switching		
ther functions			
External 10 MHz frequency reference input	Voltage/waveform	0.5 Vp-p to 5 Vp-p, Sine wave or square wave	
Frequency reference output		Iltiple FG410, FG420 units.	
External addition input	Voltage/waveform 1 Vp-p/50 Ω square wave, 10 MHz  Function to add the external signal to the waveform output signal.		
External addition in par	Addition gain	x2/x10/off selectable The maximum output voltage range is fixed to 4 Vp-p (x2) or 20 Vp-p (x10).	
	Voltage/waveform	-1 V to +1 V, DC to 10 MHz (-3 dB)	
	Input impedance	10 kΩ, unbalanced	
Multi input/output	Used for sweep and	sequence control.	
Synchronization of multiple units		issible. Up to 6 units can be connected with BNC cables in the connections, using the frequency reference output and externation ference input.	
User-Defined Unit	_	e value in any unit, using a specified conversion expression.	
	Setting target	Frequency, period, amplitude, DC offset, phase, and duty	
	Conversion expression	[(Setting target value) $+ n$ ] $\times m$ , or [ $\log_{10}$ (setting target value) $+ n$ ] $\times m$ Specification of conversion expression and values of n	
	Unit character string		
Setting saving capacity Interface		non-volatile memory) PI-1999, IEEE-488.2)	
eneral Characteristics			
Display	3.5 inch TFT color LC		
Input/output ground	<ul> <li>The signal grounds for waveform output, sync/sub output and external modulation addition input are insulated from the housing. (42 Vpk max. These signal grounds are common within the same channel.)</li> <li>The signal ground for the external 10 MHz frequency reference input is insulated from the housing. (42 Vpk max.)</li> <li>Each signal ground for CH1, CH2 and external 10 MHz frequency reference input</li> </ul>		
Power supply	is independent.  AC 100 V to 230 V ±	:10% (250 V max.)	
Power consumption	50 Hz/60 Hz ±2 Hz FG410 50 VA or less		
Operating temperature/	FG420 75 VA or less 0°C to +40°C, 5%RH to 85%RH		
humidity range	(Absolute humidity of 1 g/m³ to 25 g/m³, no condensation)		
Weight	Approx. 2.1 kg (main unit excluding accessories) 216 (W) × 88 (H) × 332 (D) mm (excluding protrusions)		
Dimensions	216 (VV) × 88 (H) × 3	is2 (b) film (excluding protrusions)	
equence Editor Editing functions		pastes, inserts, and deletes steps equence data to/from a file.	
	Sequence can be a	edited without connecting the device.	
Displaying functions	<ul> <li>Editing screen: Lists parameters for each step.</li> <li>Sequence view screen: Graphs changes of up to five parameters.</li> </ul>		
Transferring functions		s sequence data to/from the device. vice the arbitrary waveform used in the sequence.	
Device control functions			
Operating environment	Windows XP/7     USB interface	·	
rbitrary Waveform Edit		nal Instruments USB driver (required)	
Editing functions	Generation (standa	ard waveform and a mathematical expression) ght line, spline, and continuous spline)	
	<ul><li>Math operation (ad</li><li>Contraction and ex</li><li>Cuts, copies, and p</li></ul>	in line, spine, and continuous spine) (dition, subtraction, multiplication, and division of waveform) dension (vertical and horizontal directions) pastes some part of waveform	
		rbitrary waveform data to/from a file.	
Disales for street		edited without connecting the device.	
Display functions	Zoom in/out     Scroll     Display unit (coordinates) selectable		
Transfer function	Cursor (A, B)      Transfers and reads arbitrary waveform data to/from the device.		
Device control function  Operating environment	Major parameter setting     Same as the operating environment for the Sequence Editor.		
oporating orivinoriment	Surric as trie opera	ang and amore or the coquette cultur.	
	Reads the wavefor	m data. (WVF/WDF format)	
viewerLITE*3 Functions			
viewerLITE* <sup>3</sup> Functions	<ul><li>Displays the wavef</li><li>Saves the wavefor</li><li>Displays the wavef</li></ul>	m data to ascii and text.  form parameter value.	
	Displays the wavefore     Saves the wavefore	m data to ascii and text. orm parameter value.	

- 11: Guaranteed numerical value. Other numerical values are nominal or typcal (typ.) values.
  12: Used after converted into arbitrary waveform.
  13: It can be downloaded from the web site.
  14: Condition: I kHz sine, amplitude setting of 20 mVp-p/open or higher.
  15: The LCD may include a few defective dots (5 dots or less).

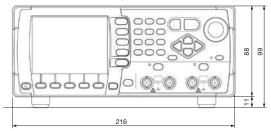

Model	Suffix Code	Description
FG410		Arbitrary/Function Generator: 1-Channel, 30 MHz
FG420		Arbitrary/Function Generator: 2-Channel, 30 MHz
Power cord	-D	UL/CSA standard, PSE
	-F	VDE standard
	-R	AS standard
	-Q	BS standard
	-H	GB standard
	-N	NBR standard

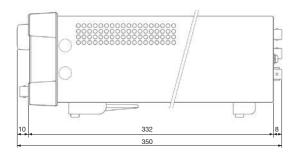

#### Standard Accessories;

Power cord (1 set), User's manuals and application software (1 set)

Model/ parts number	Product	Description
705928	Multi input/output cable	For sweep/sequence control
751537-E2	Rack mount kit	Inch rack mounting (for 1 unit)
751537-J2	Rack mount kit	Millimeter rack mounting (for 1 unit)
751538-E2	Rack mount kit	Inch rack mounting (for 2 units)
751538-J2	Rack mount kit	Millimeter rack mounting (for 2 units)

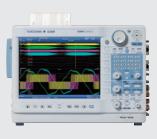

#### **Related Products**

#### ScopeCorder DL850E/DL850EV

- 17 types of plug-in modules (voltage, temperature, strain, acceleration, frequency, logic, CAN, LIN)
- High-speed (up to 100 MS/s), High resolution (up to 16-bit), Isolated (up to 1 kV)
- 128-CH voltage/temperature, 128-bit logic measurement

### Mixed Signal Oscilloscope DLM4000

- 8 analog channels/7 analog channels + 8-bit logic
- 350 MHz, 500 MHz analog bandwidth
- Large 12.1-inch LCD display
- Long memory: Up to 125 M points

### Mixed Signal Oscilloscope DLM2000

- Lightweight and compact
- 200 MHz, 350 MHz, 500 MHz analog bandwidth
- 4 analog channels/3 analog channels
  + 8-bit logic
- Long memory: Up to 125 M points

#### Notice

- Before operating the product, read the user's manual thoroughly for proper and safe operation.
- If this product is for use with a system requiring safeguards that directly involve personnel safety, please contact the Yokogawa offices.

This is a Class A instrument based on Emission standards EN61326-1, and is designed for an industrial environment.

an industrial environment. Operation of this equipment in a residential area may cause radio interference, in which case users will be responsible for any interference which they cause.
